

User will choose if it is a customer or manager.
By default the selected is the Customer.

Yellow because according to google. it will make you hungry.
I am hungry now looking hehehe

Table No.

2

Select Table Number

Proceed to Order >>

This is the Menu List.
Default list shown is "Show All".

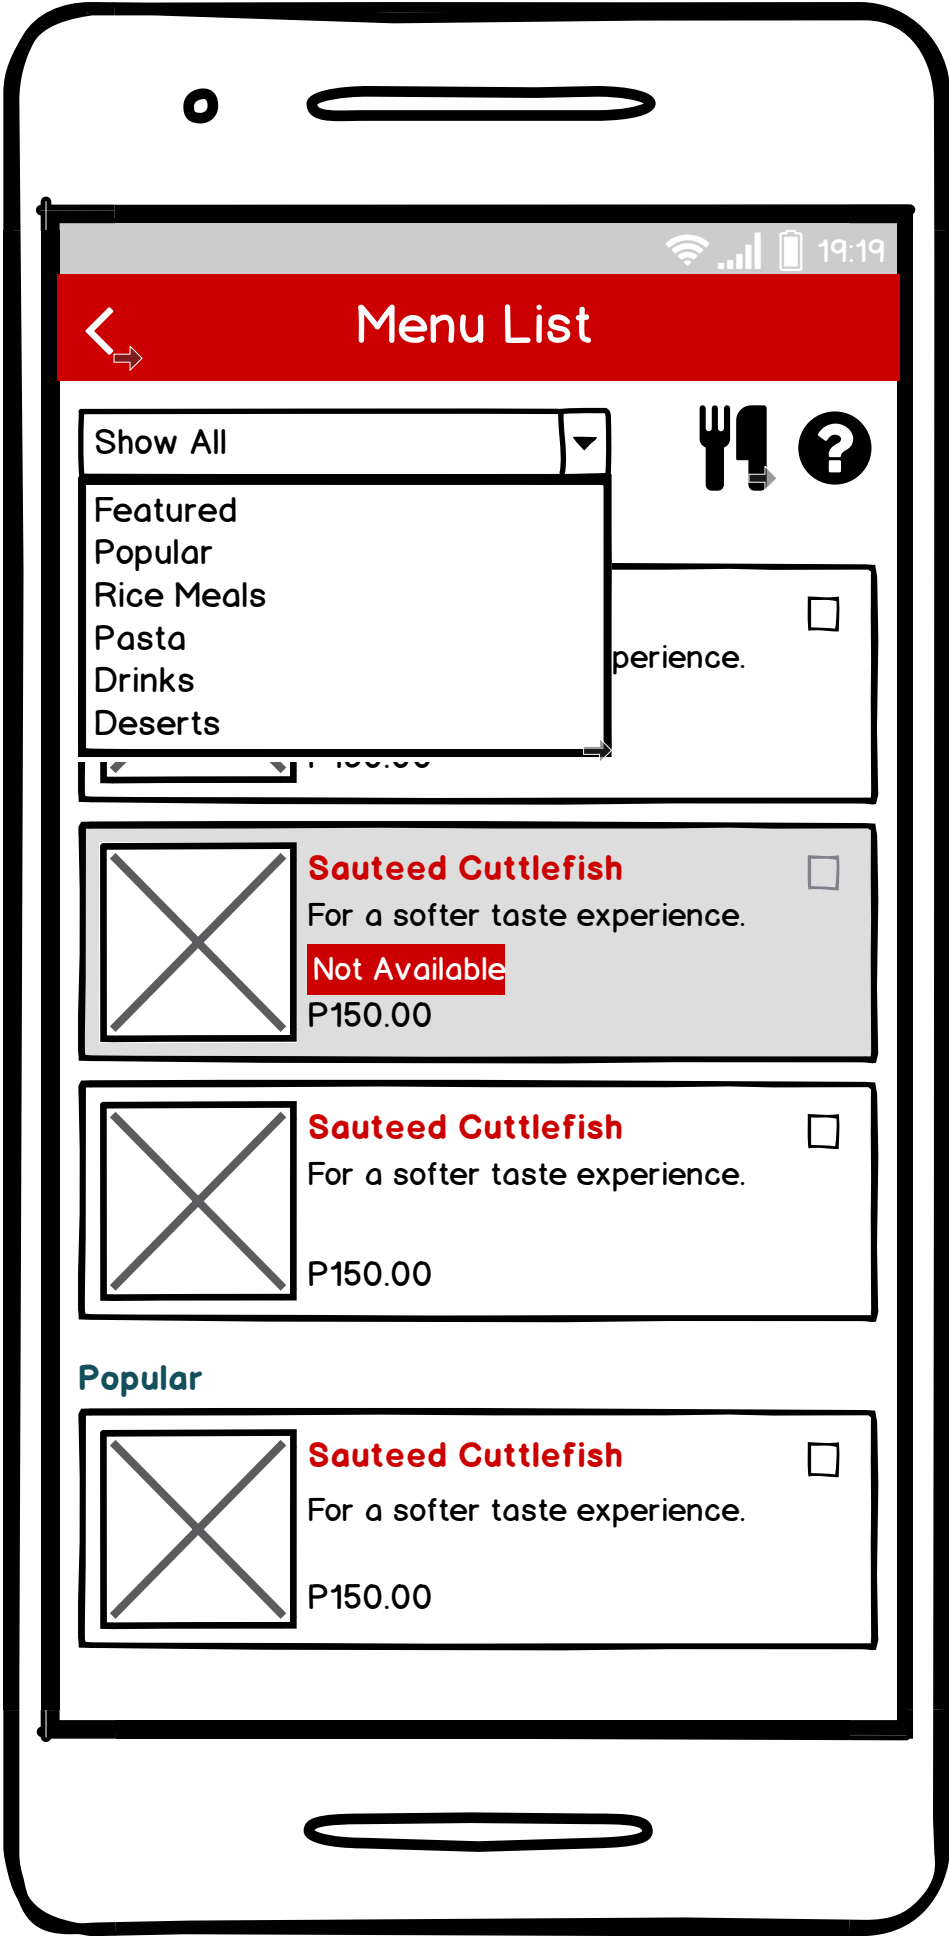

For items that is not available. It is still shown.

The icon for orders is the spoon and fork icon.

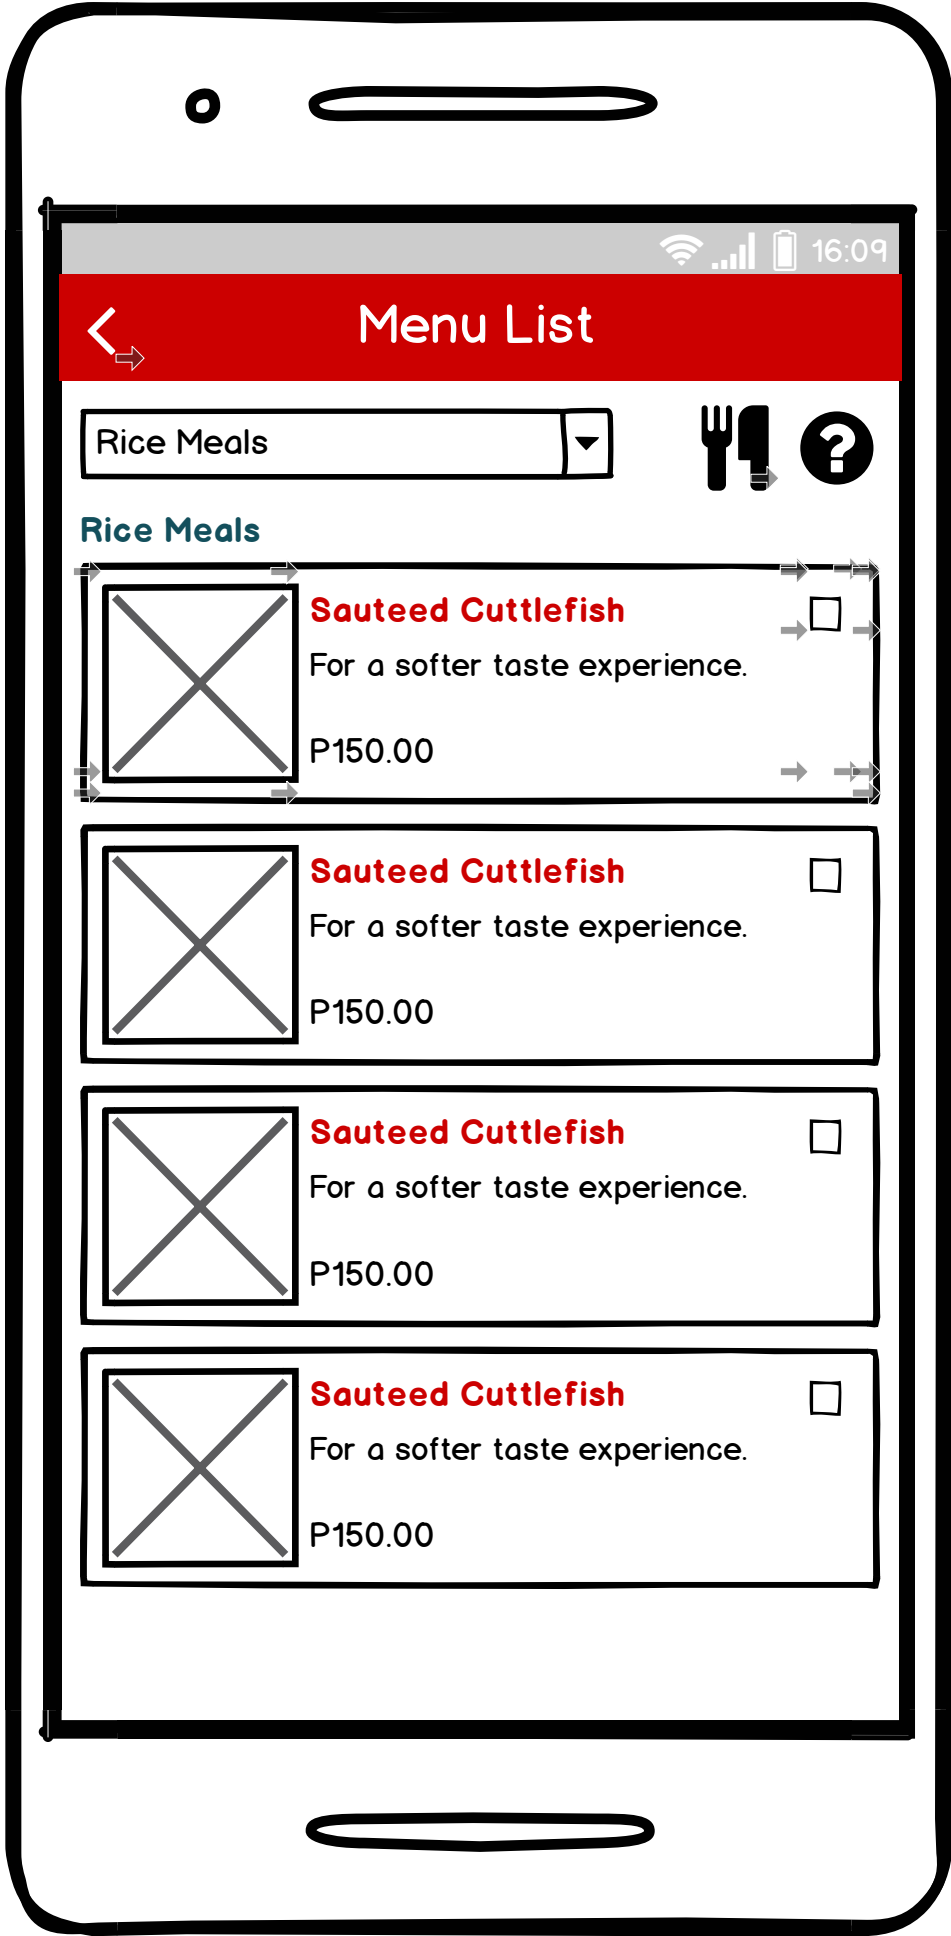

This is a feature where the staff will be notified if the customer wants there assistance.

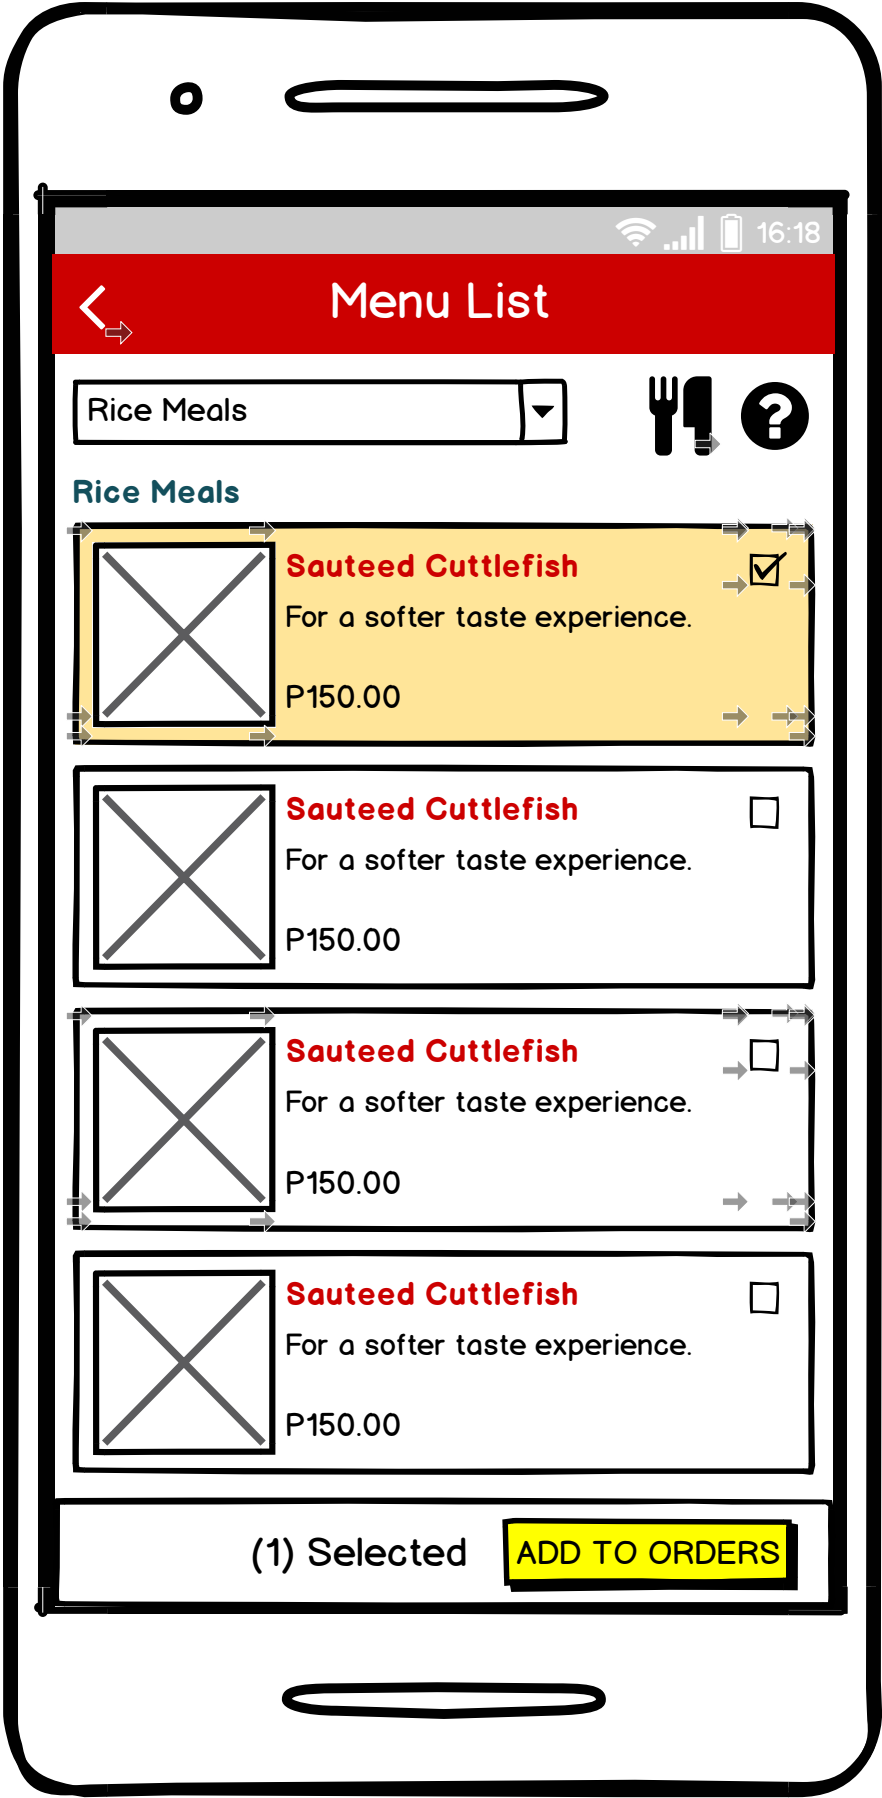

Example, the customer does not know how to operate the app.

This is the Menu List.
Default list shown is "Show All".

For items that is not available. It is still shown.

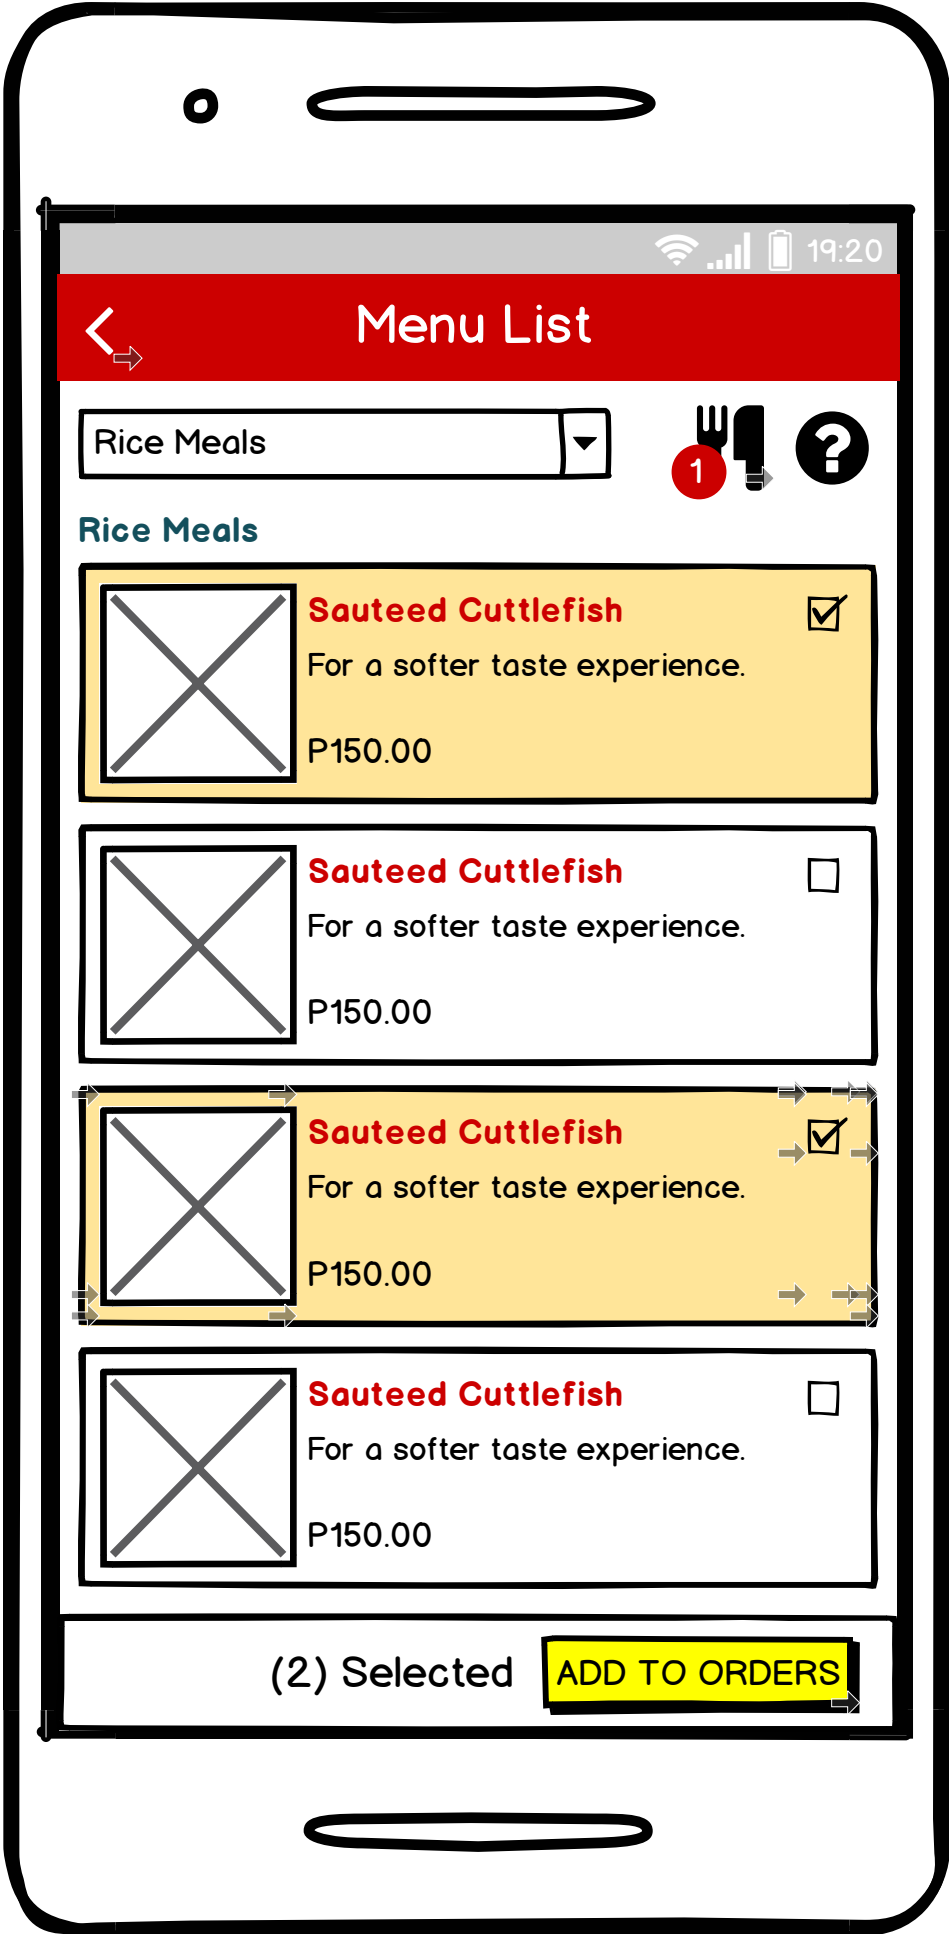

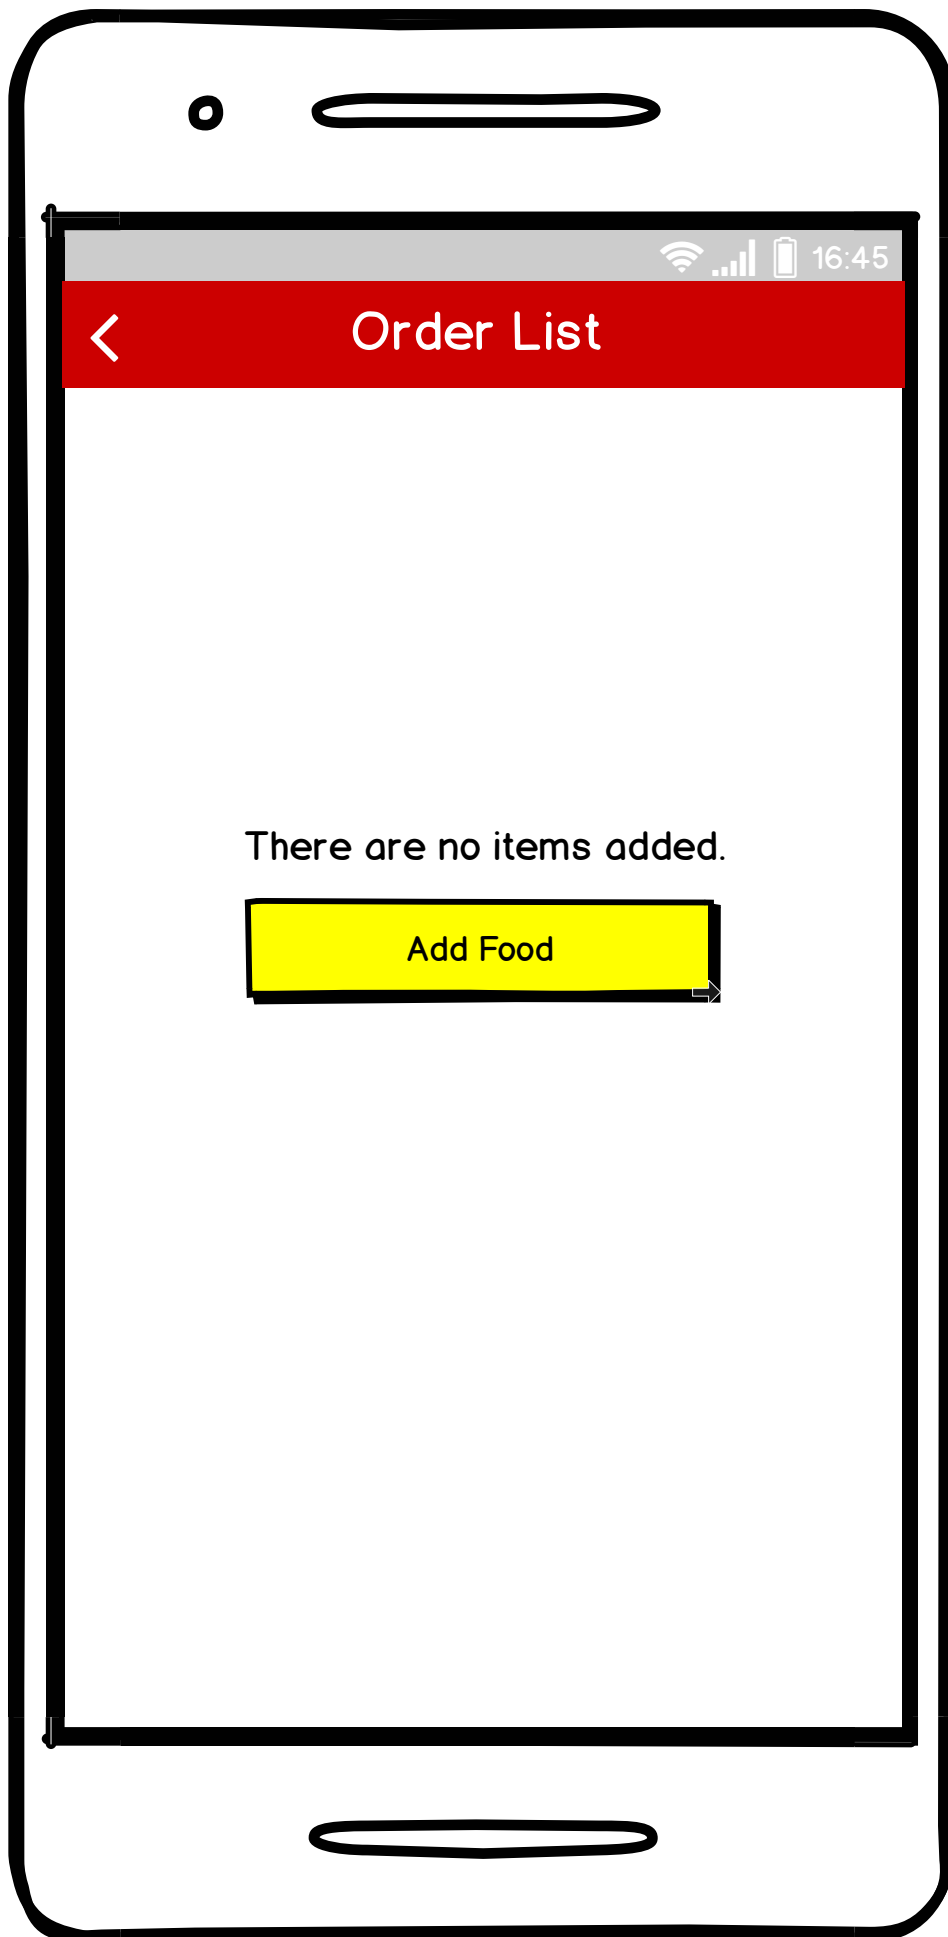

The selected panel is shown if there is atleast 1 selected in the food menu.

The computed selected orders is based on selected foods in the whole category.

Like example:
1 selected in featured
2 in rice meals.
so the output is -> (3) Selected

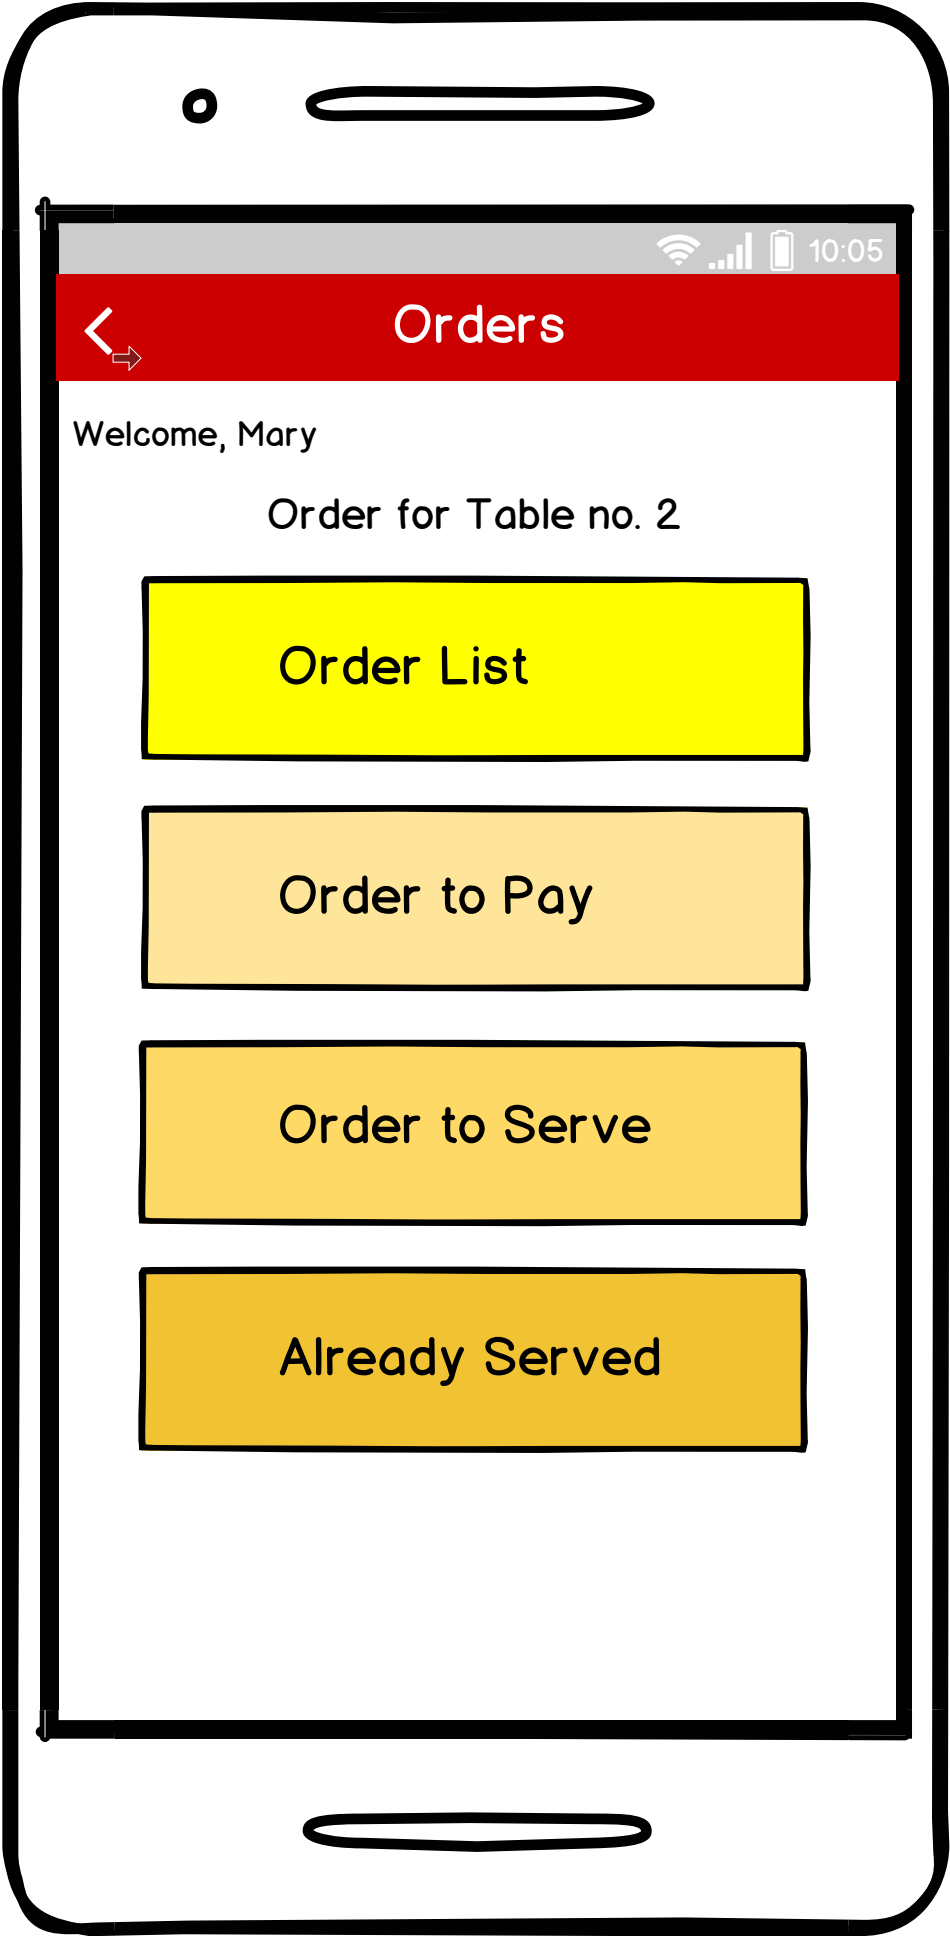

The notification in the order icon is the total no of order items by you, and the other users in the table.

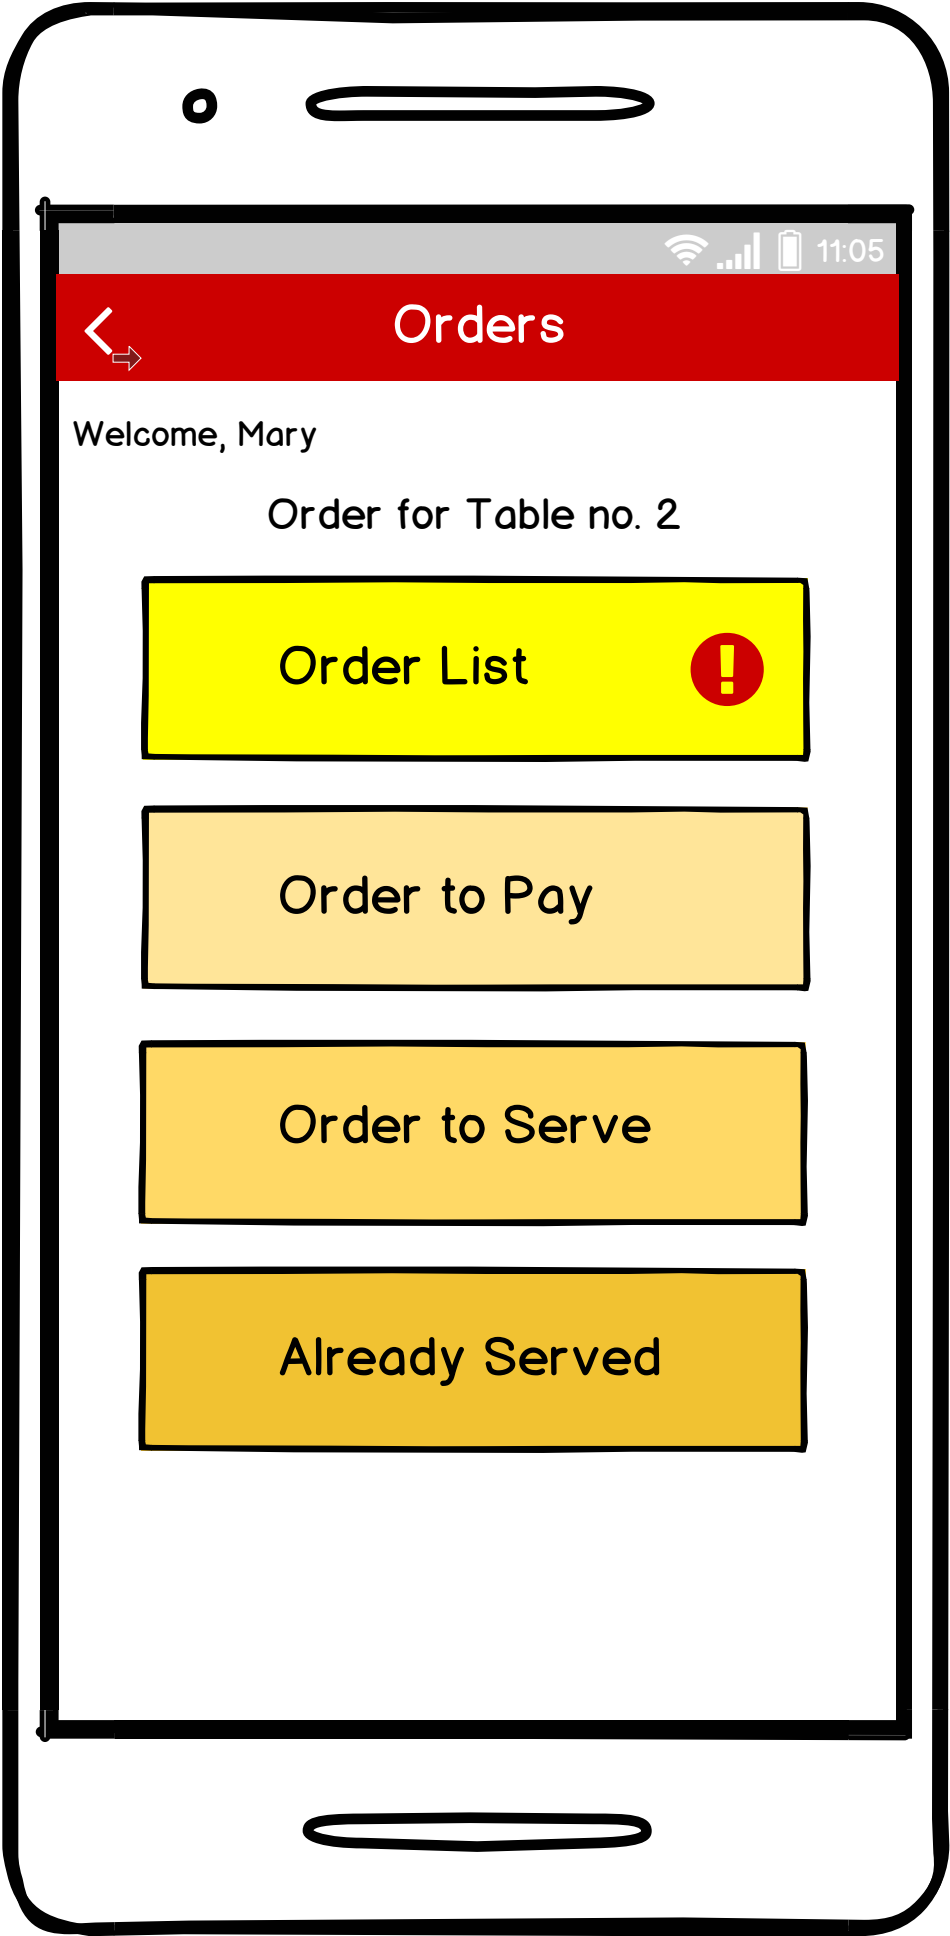

The notification in the order icon means that there are new orders. (unseen orders by the user).

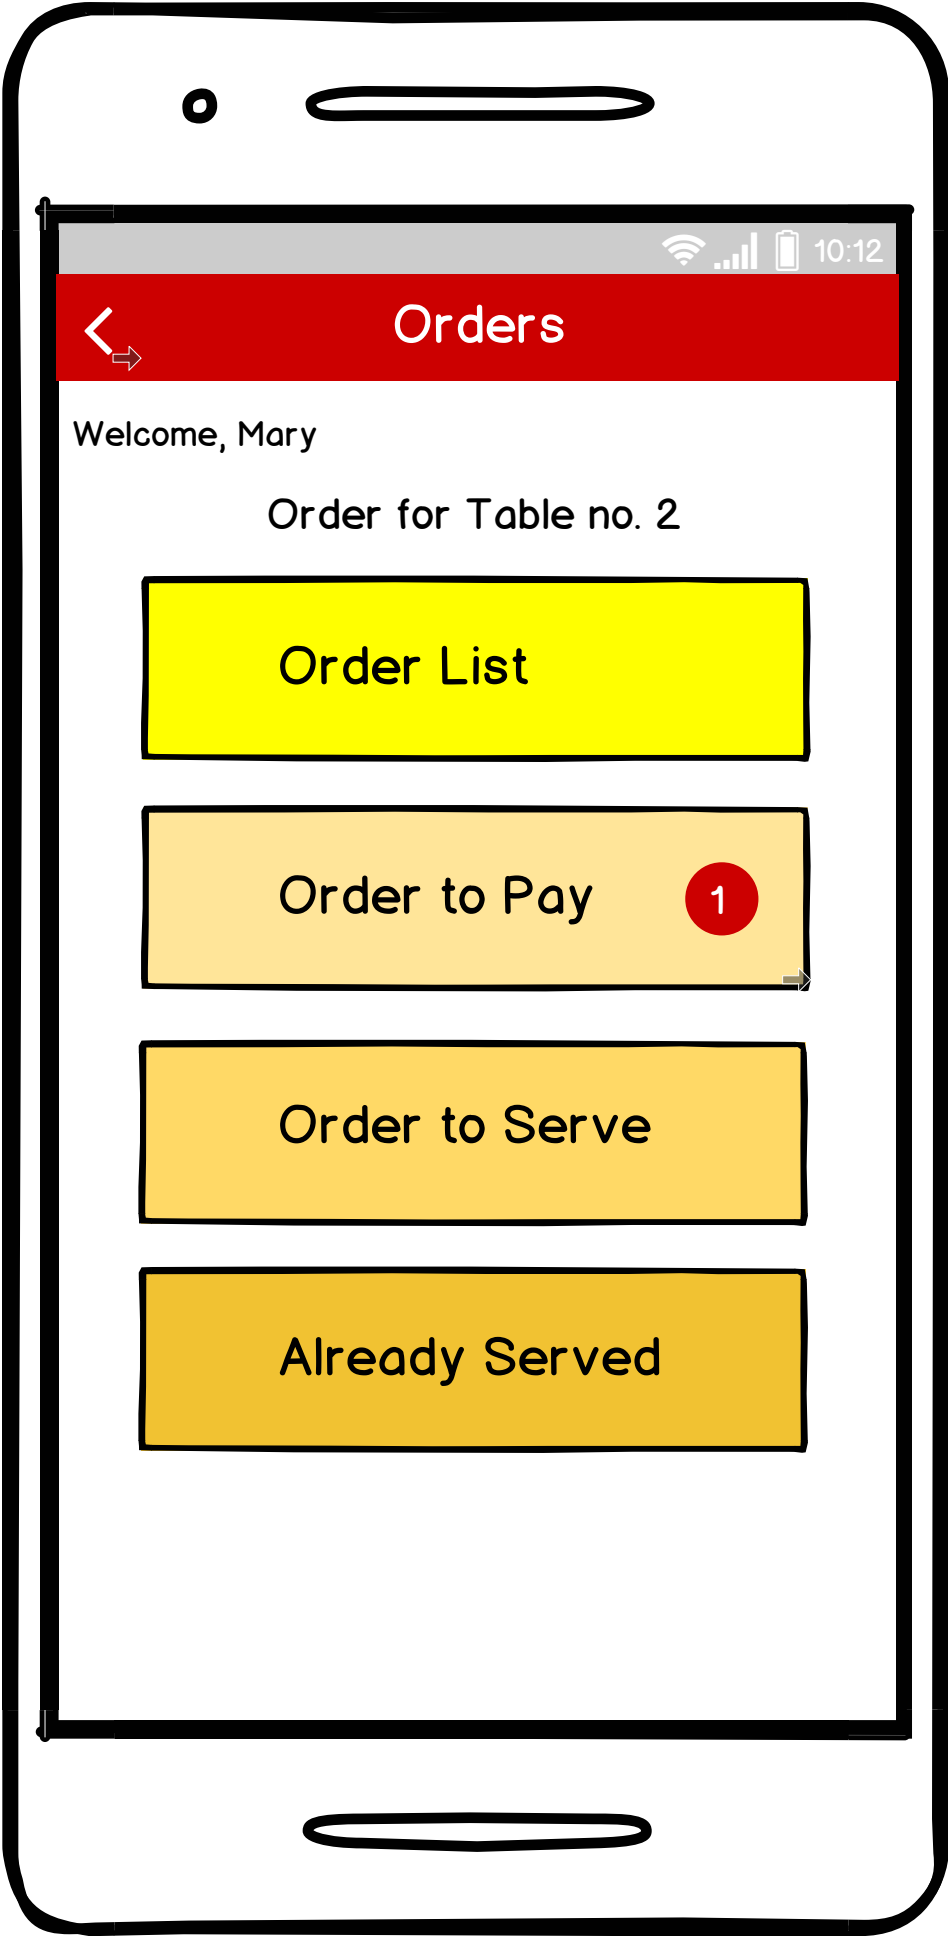

These new orders are from other users that share the same table. It is to notify the user that someone order.

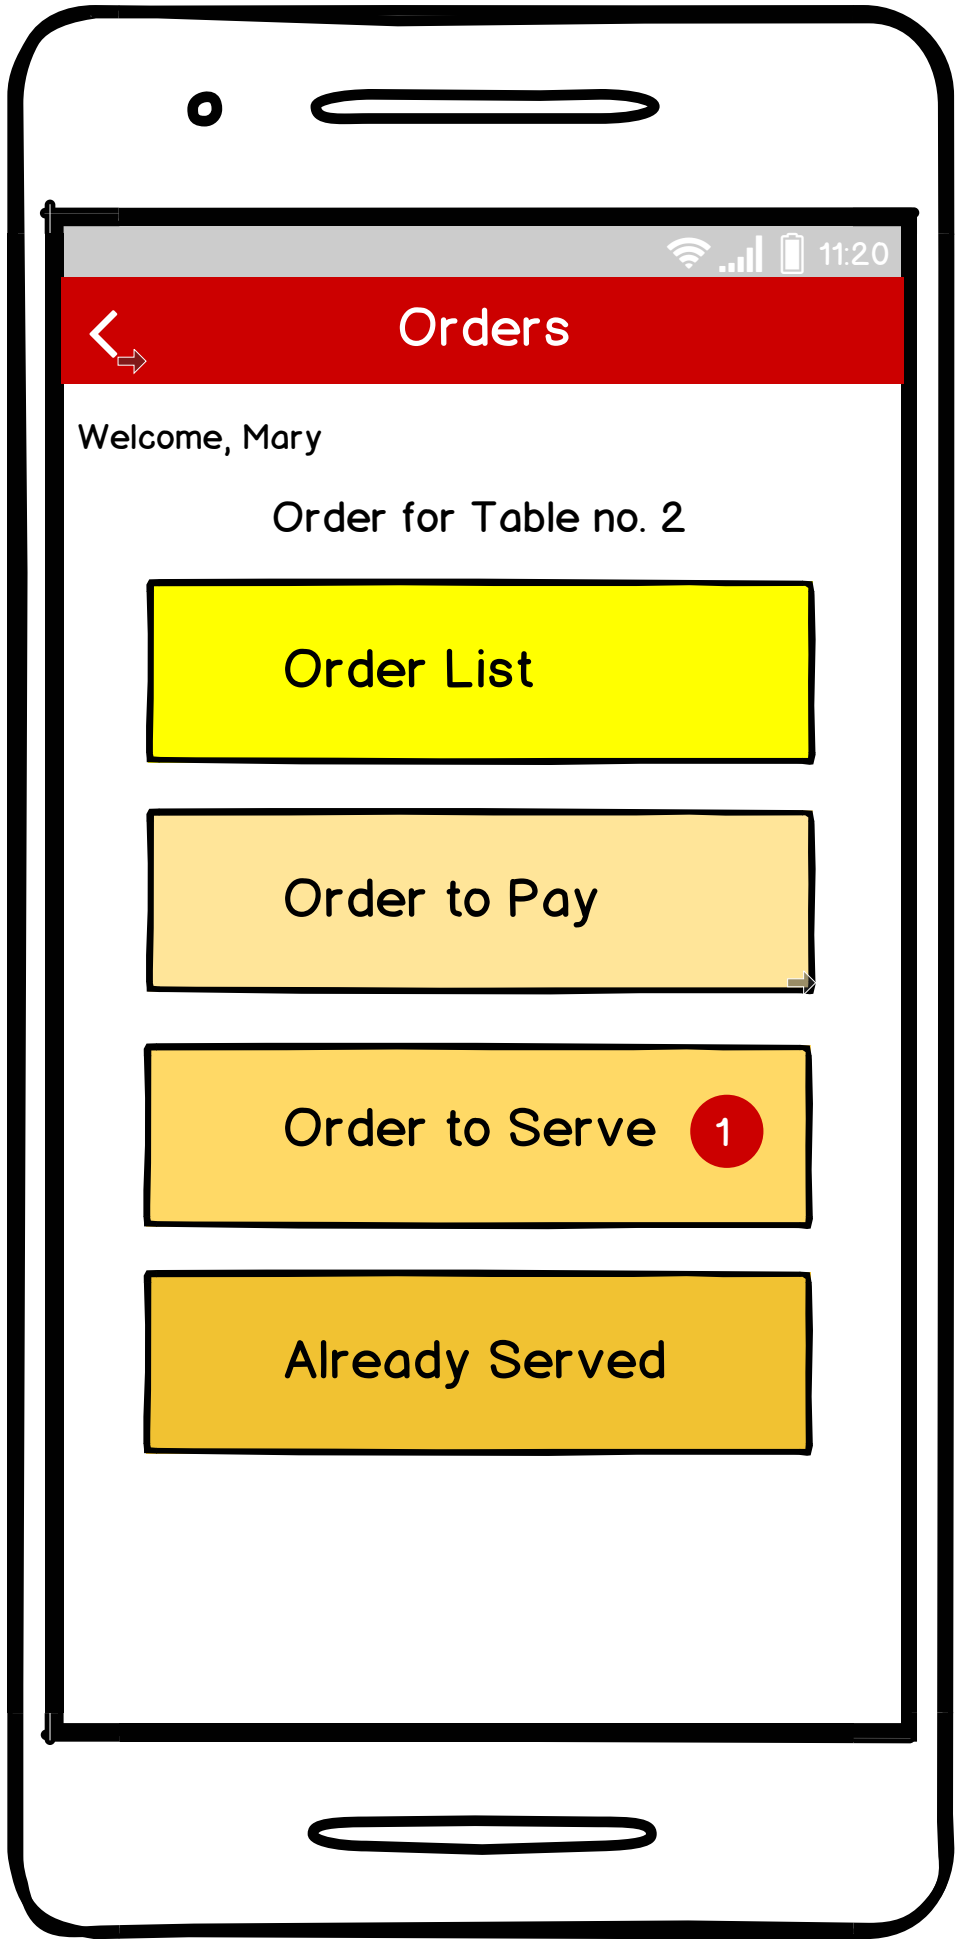

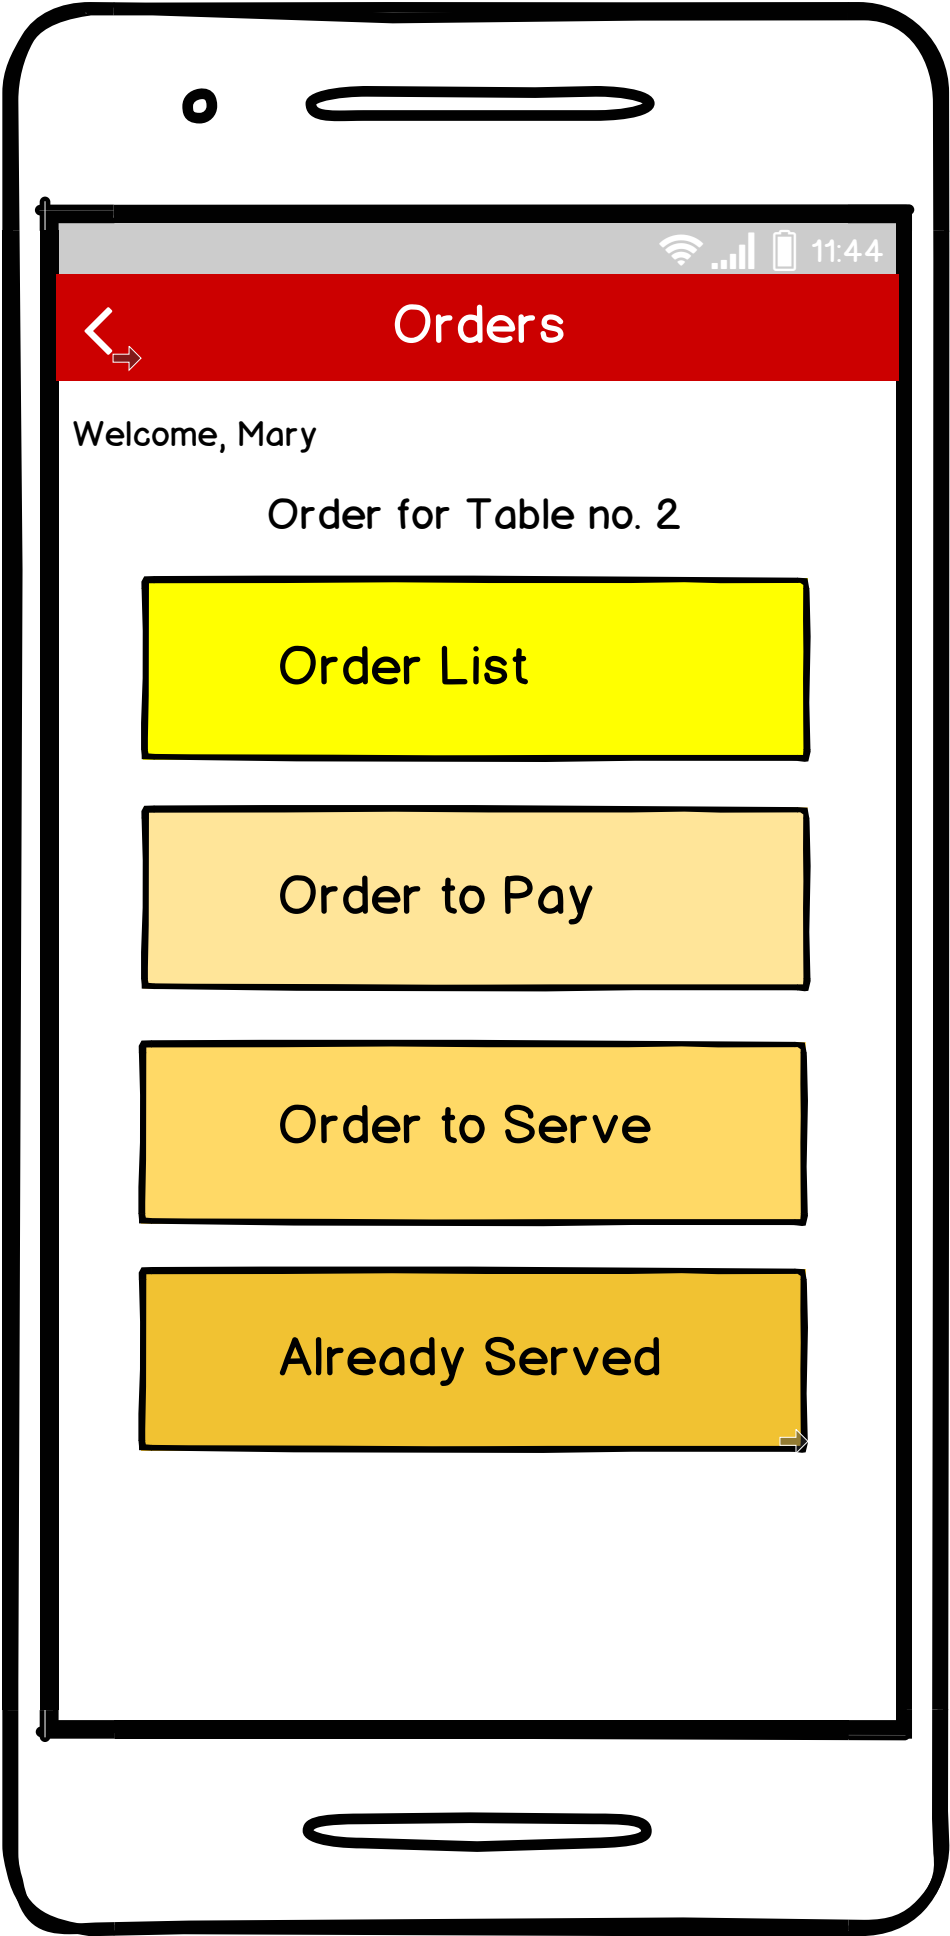

Qty in Order List are the total number of items added for order.

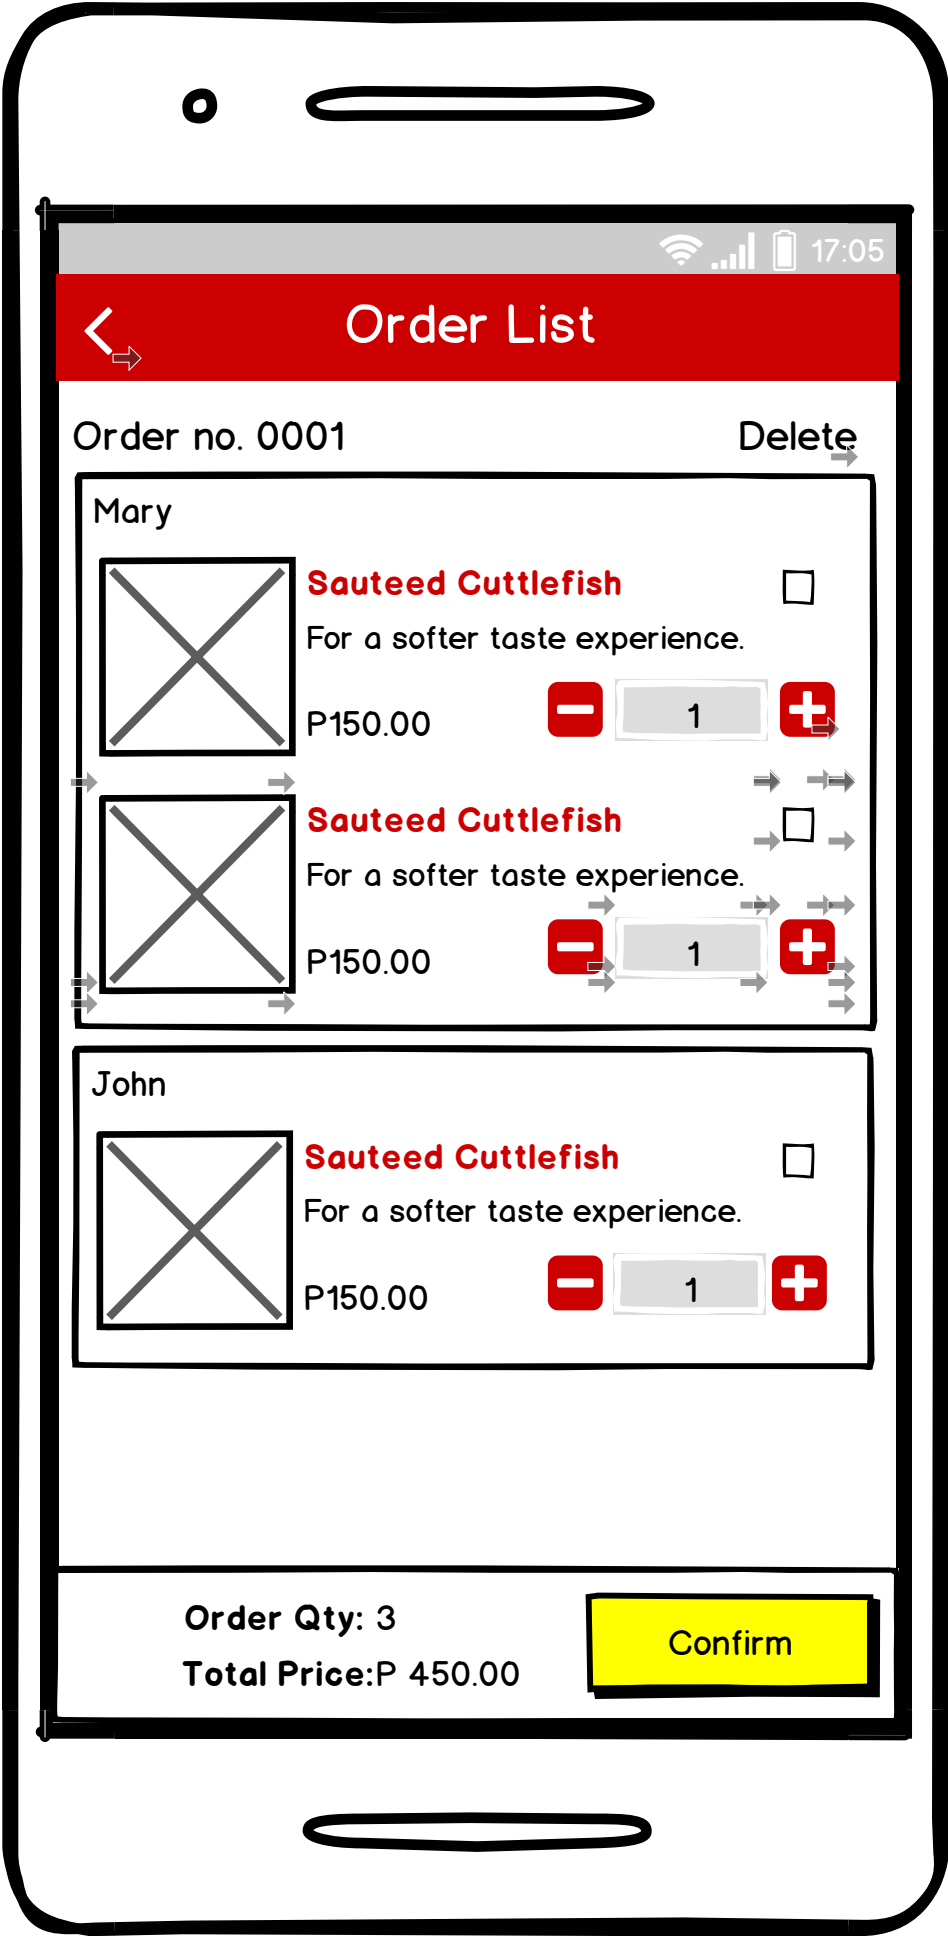

Qty in Order List are the total number of items added for order.

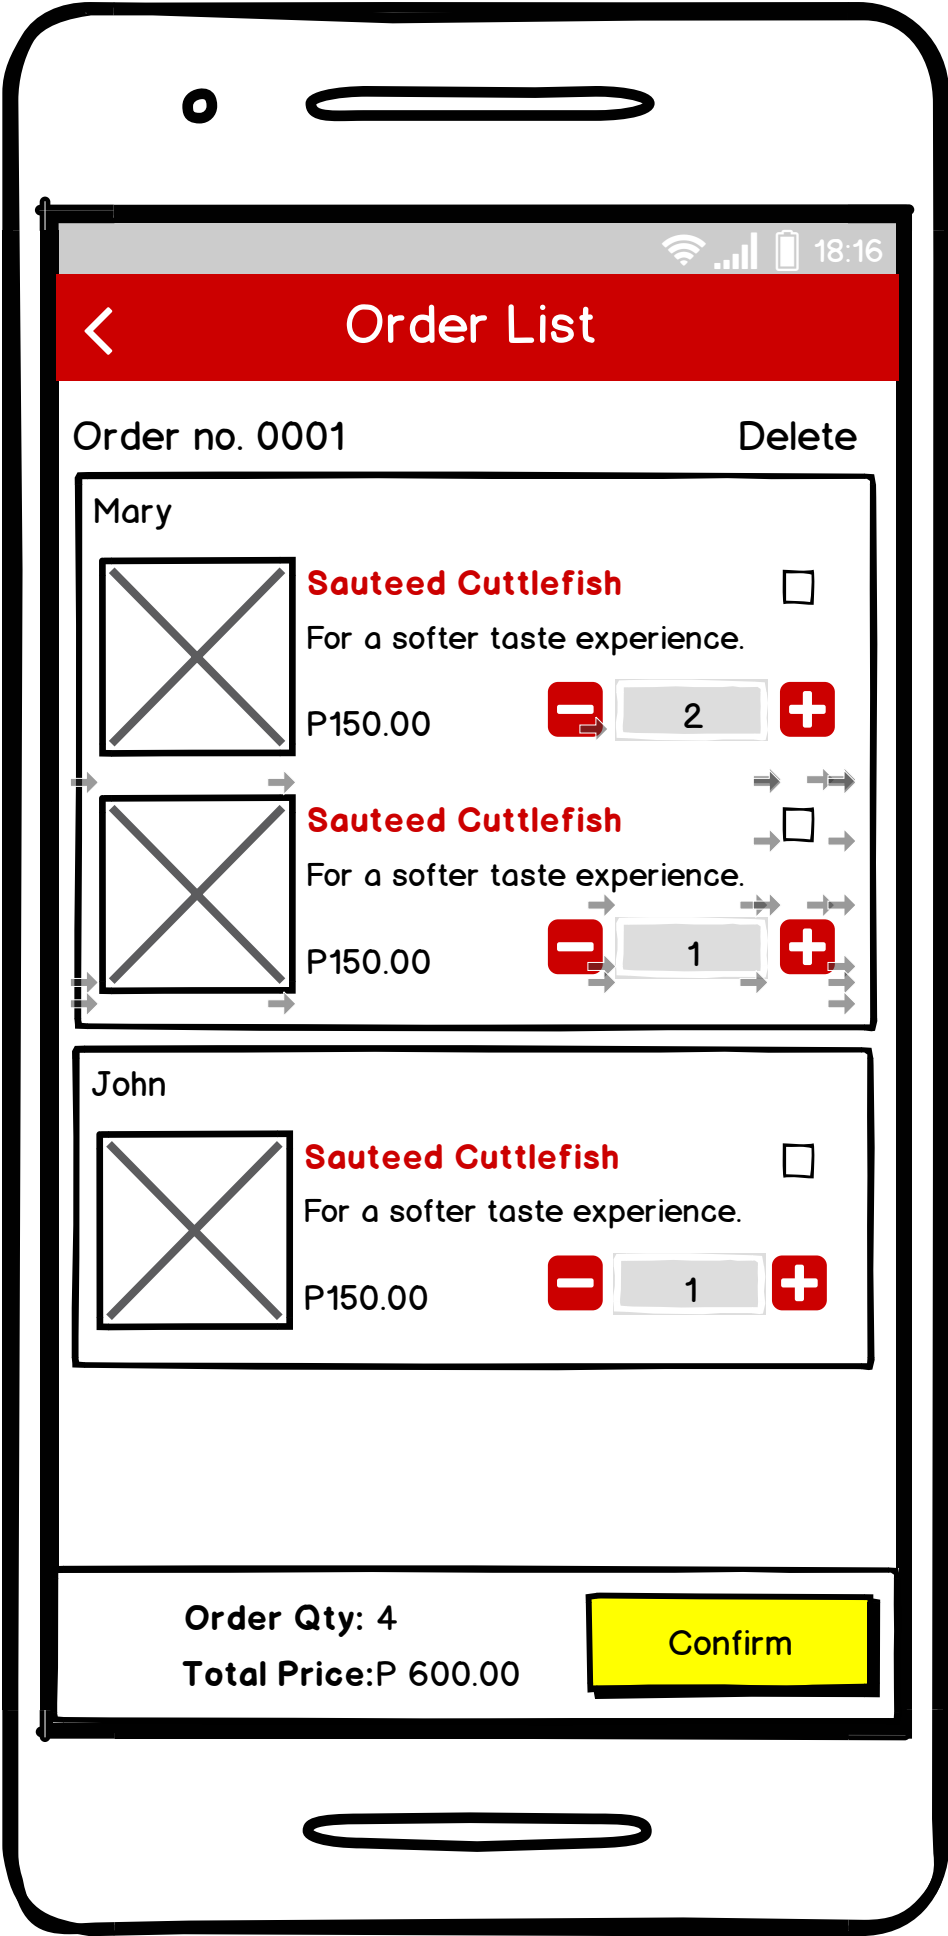

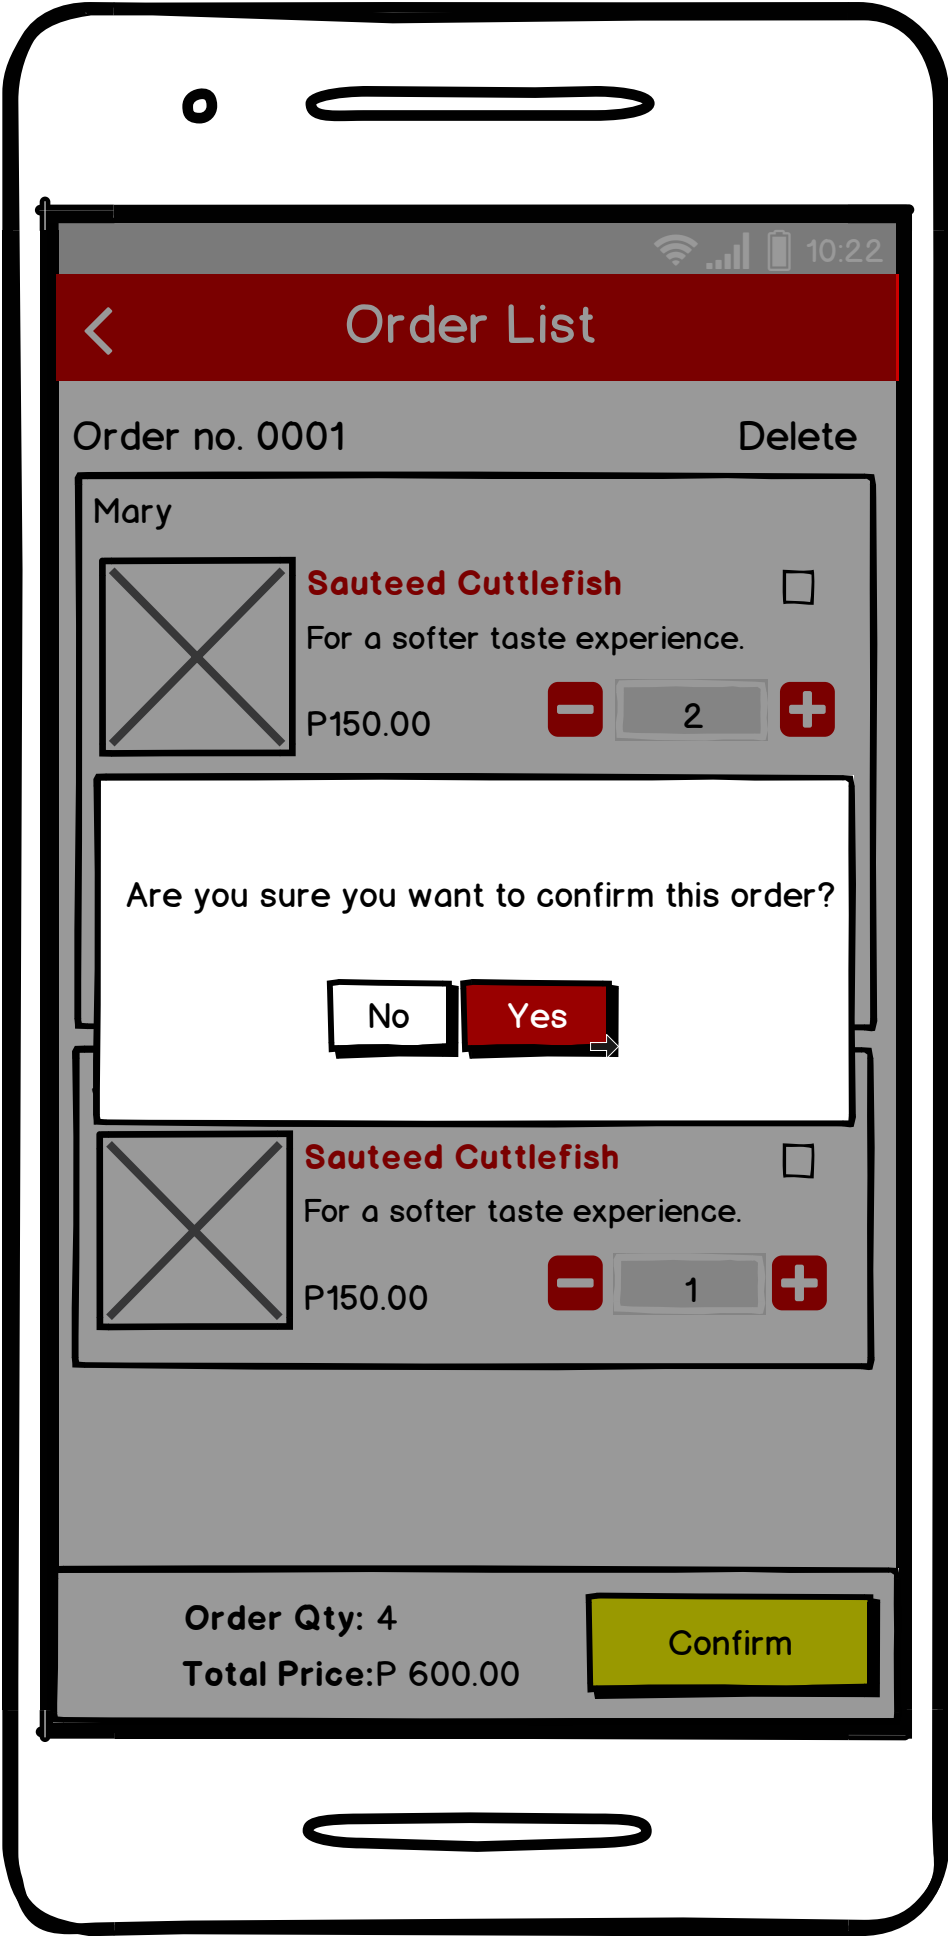

Qty in Order List are the total number of items added for order.

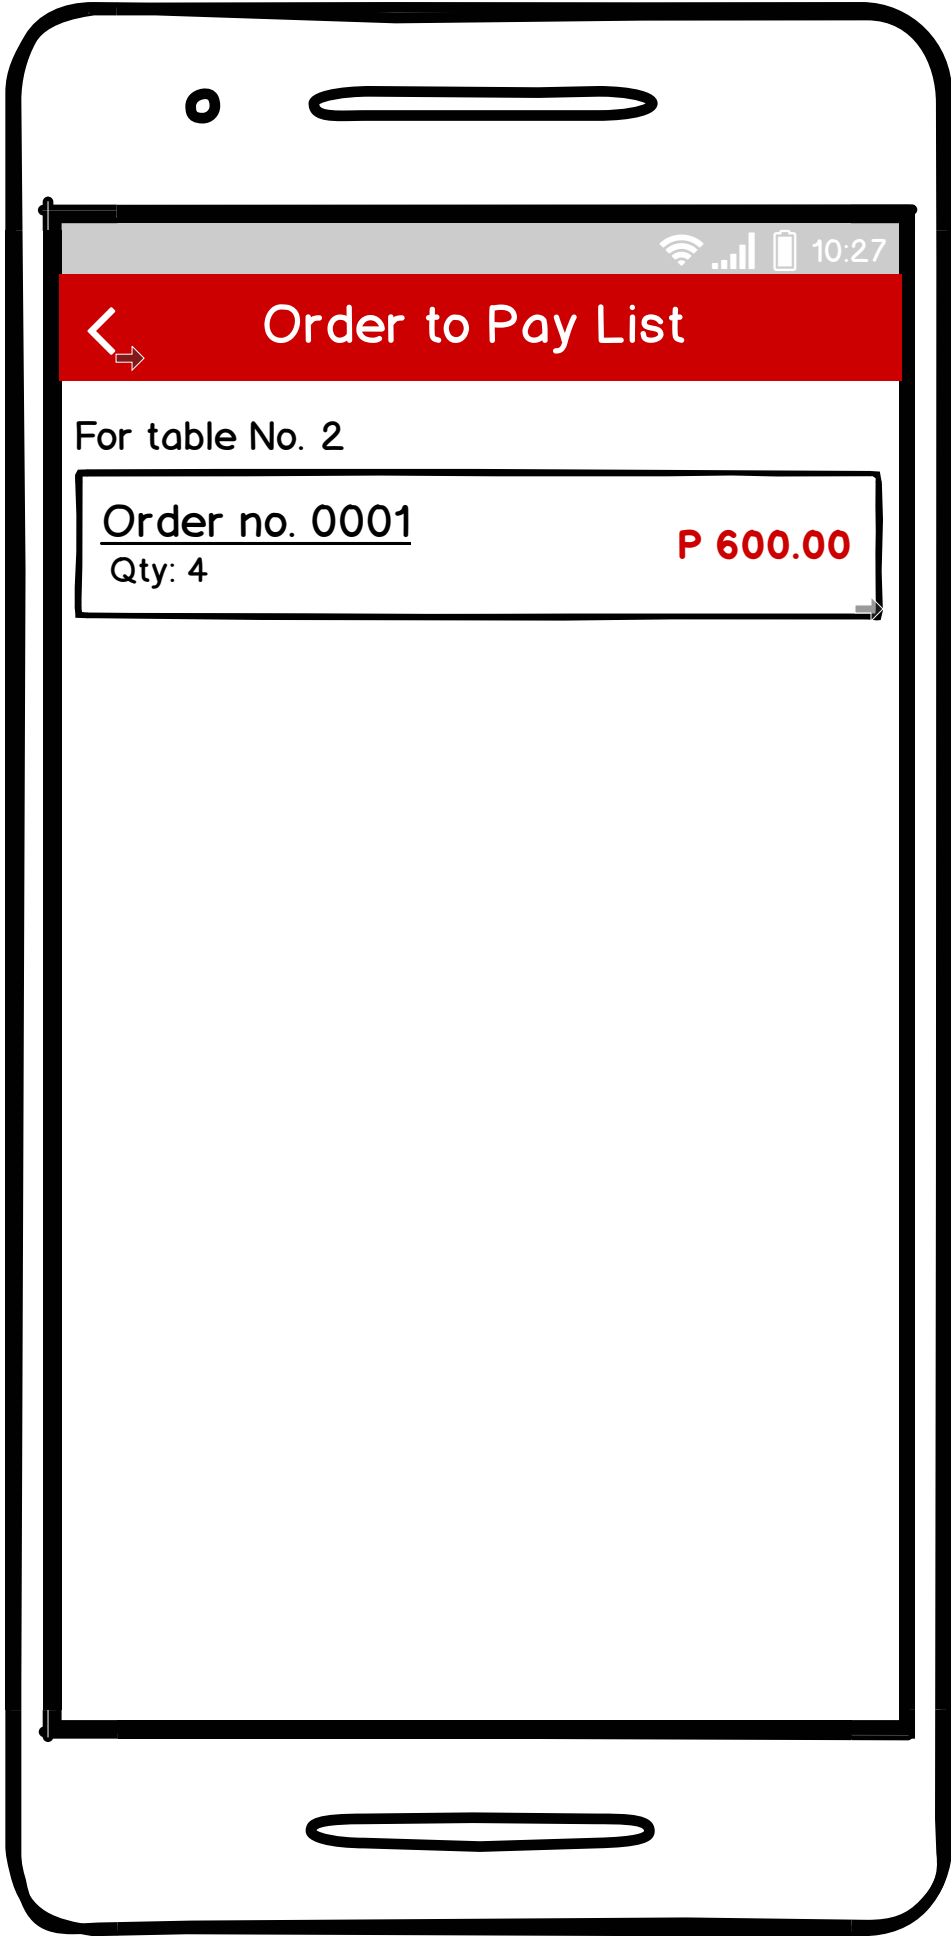

Minimum Qty is 1. Max is None but will propmt warning if the qty is more 5.

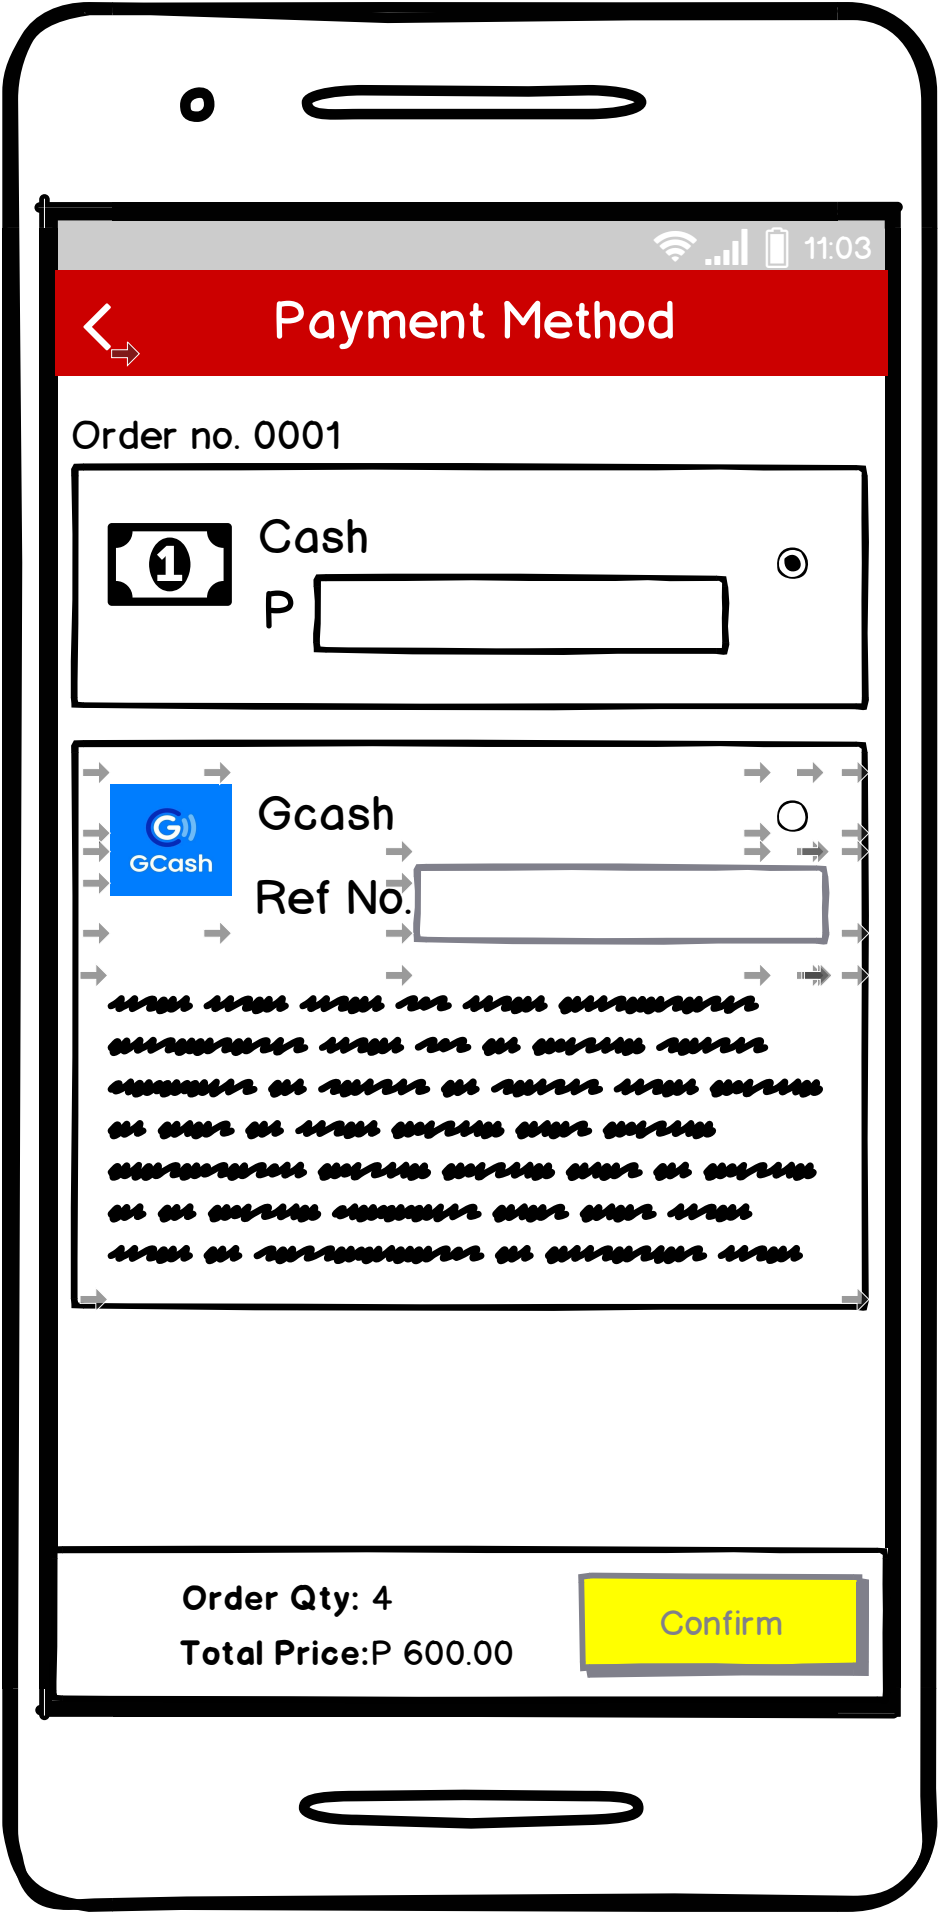

Minimum Qty is 1. Max is None but will propmt warning if the qty is more 5.

Minimum Qty is 1. Max is None but will propmt warning if the qty is more 5.

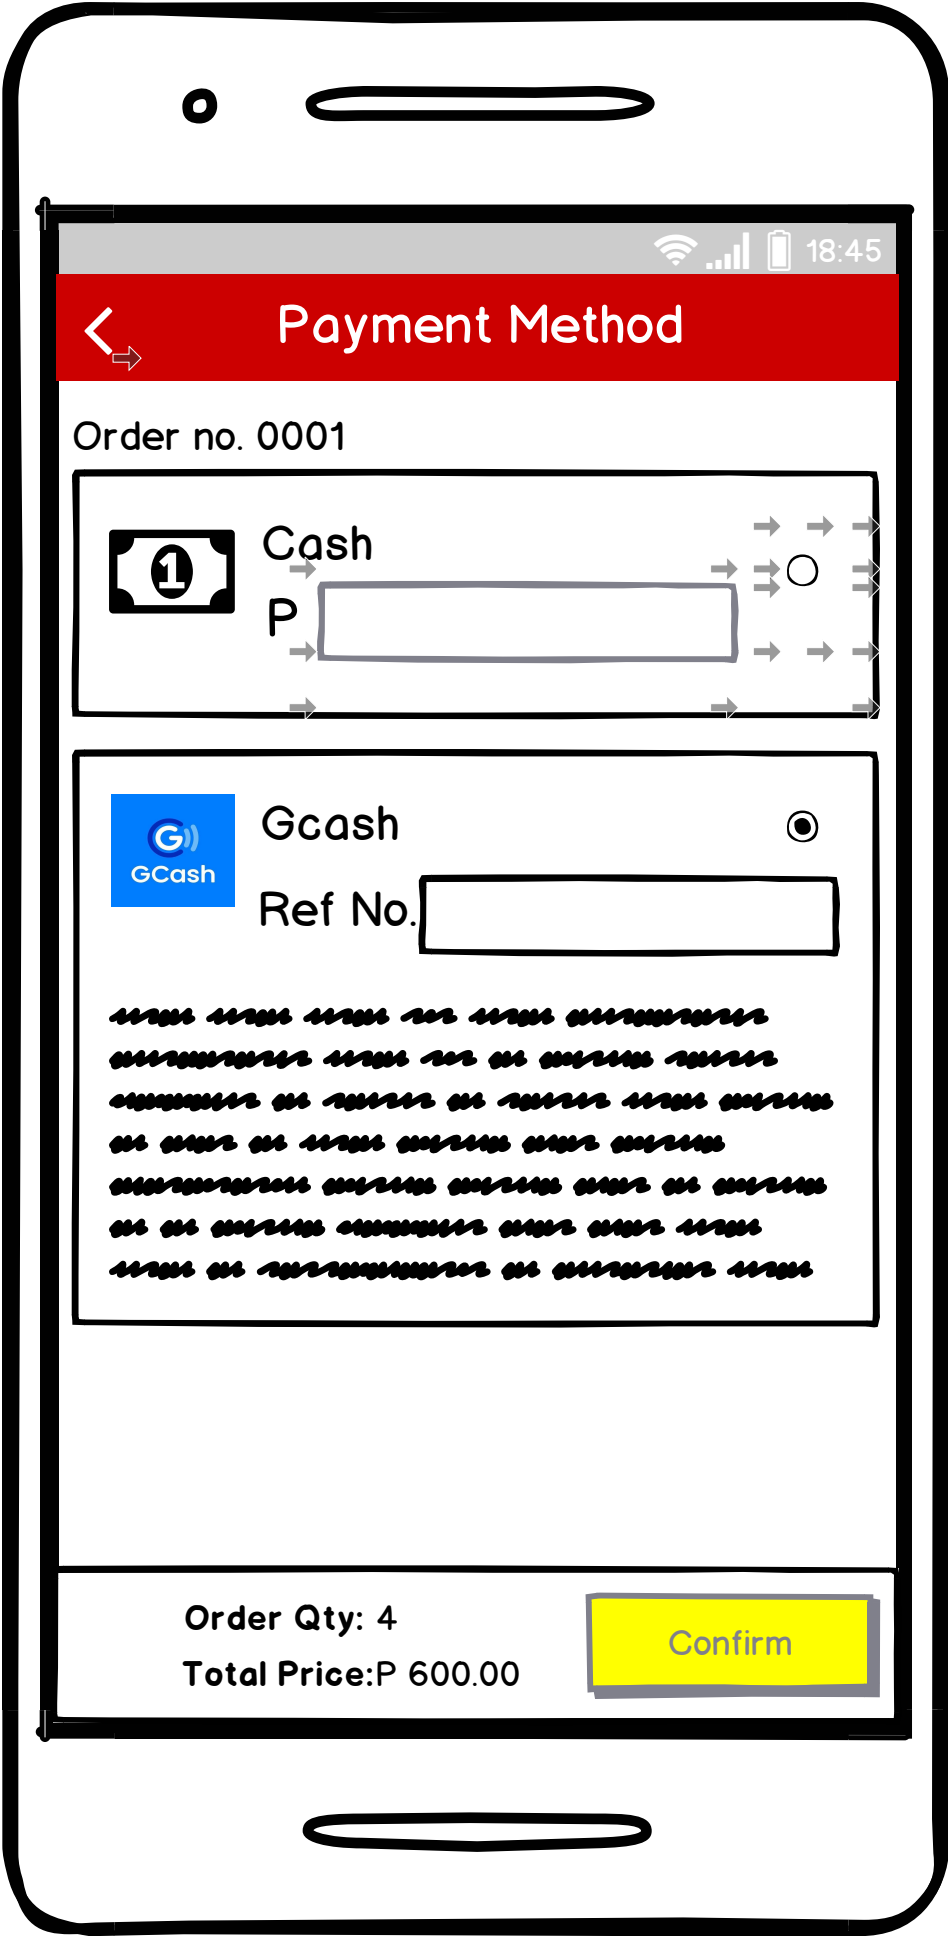

Default payment method is cash.

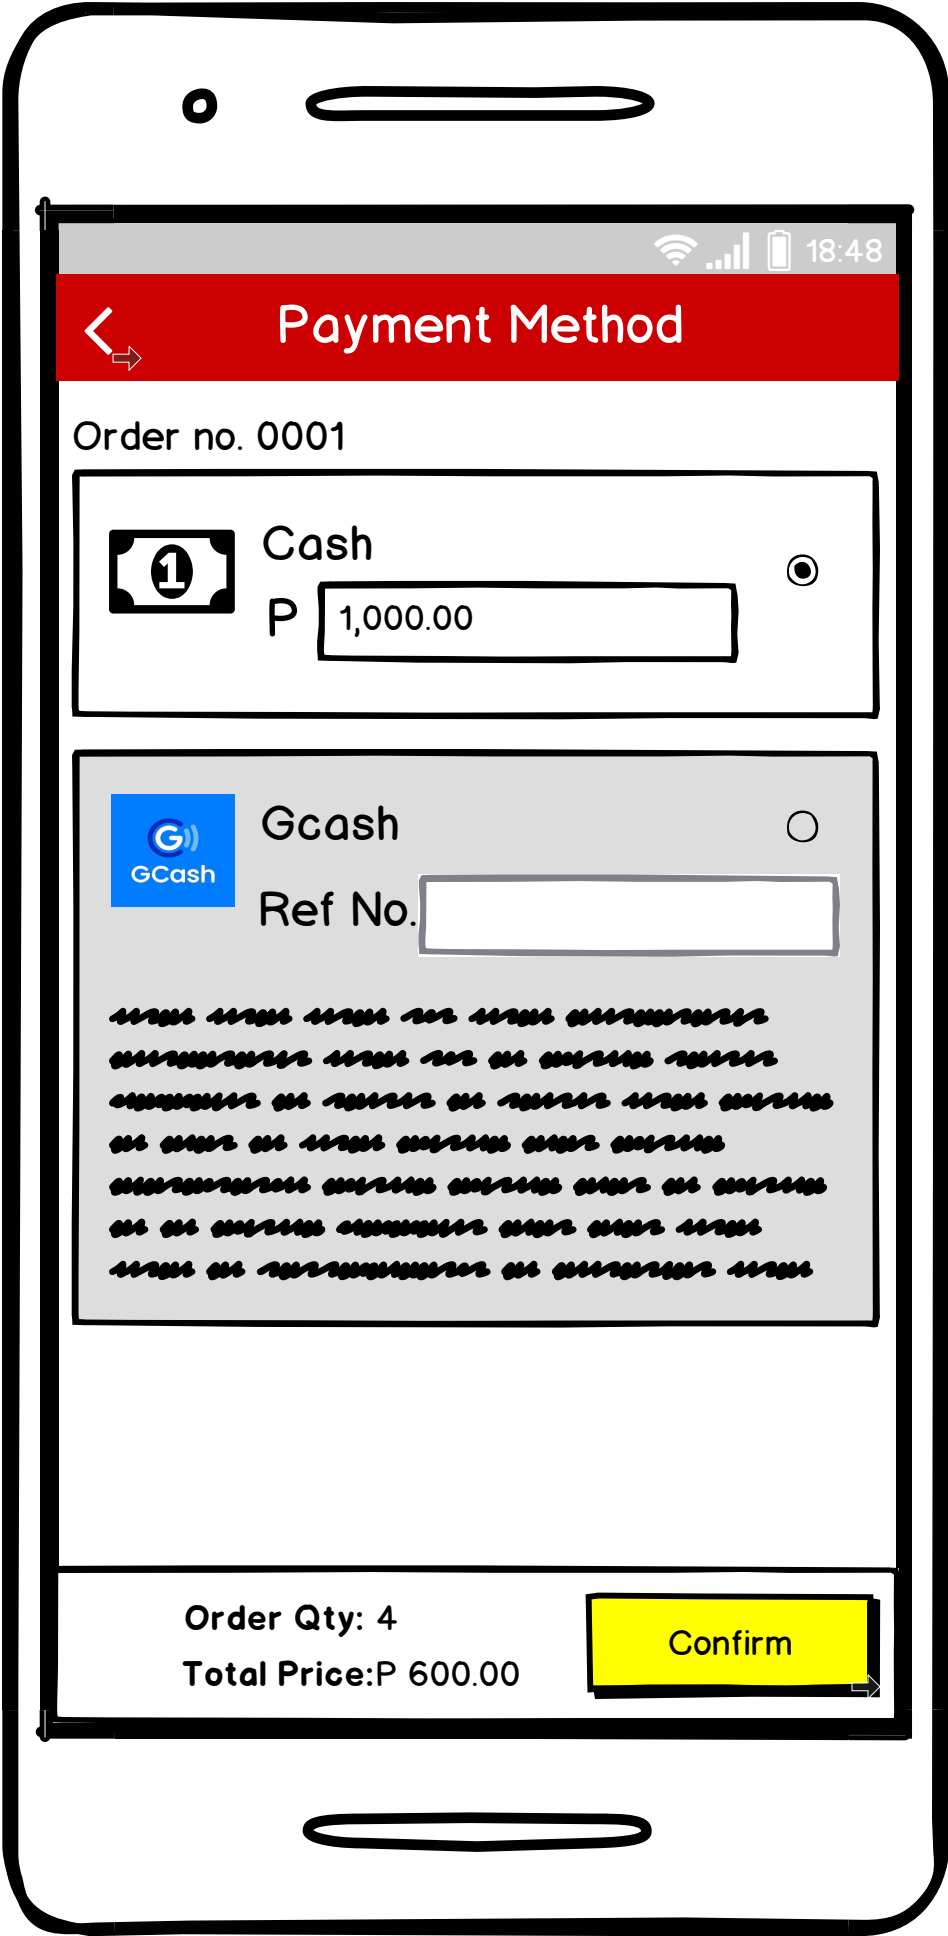

Error if cash is less than the total price.

Pay Now button is disabled if there is no input in the selected payment method. Or if there is error.

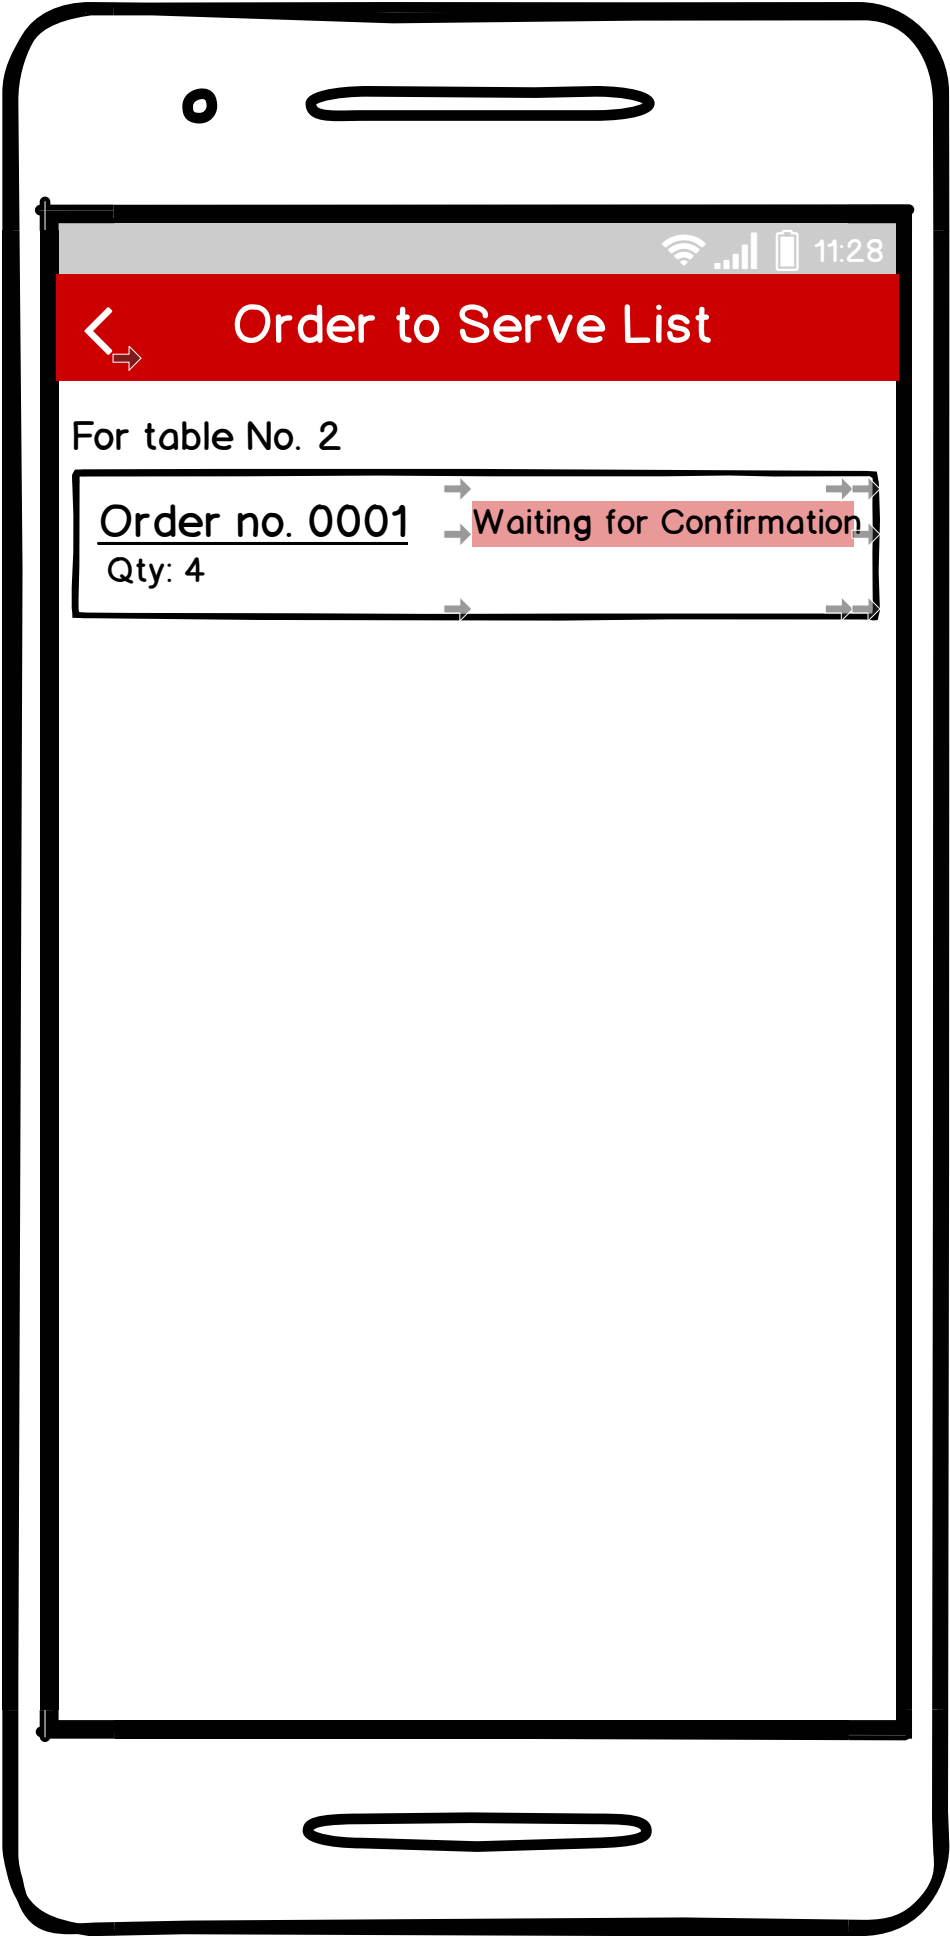

The block text under gcash is steps on how to pay in gcash.

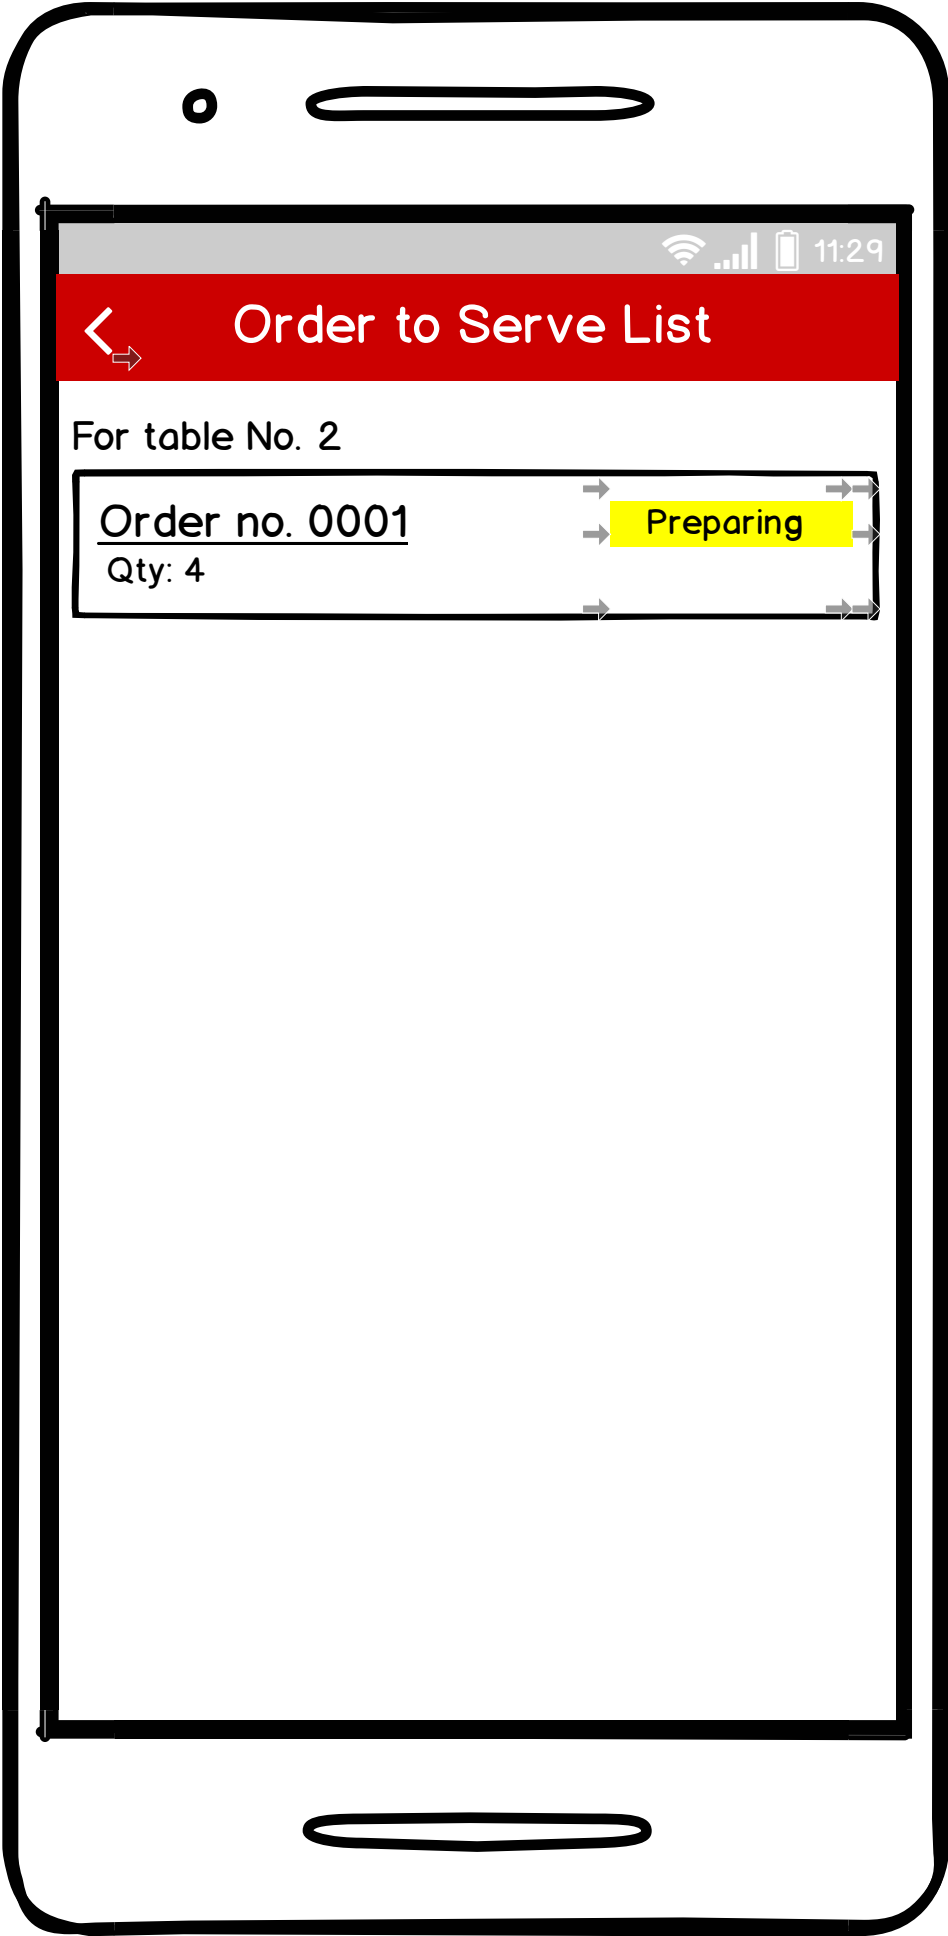

Ref No. is last 5 digit of the ref only. (for customer convenience)

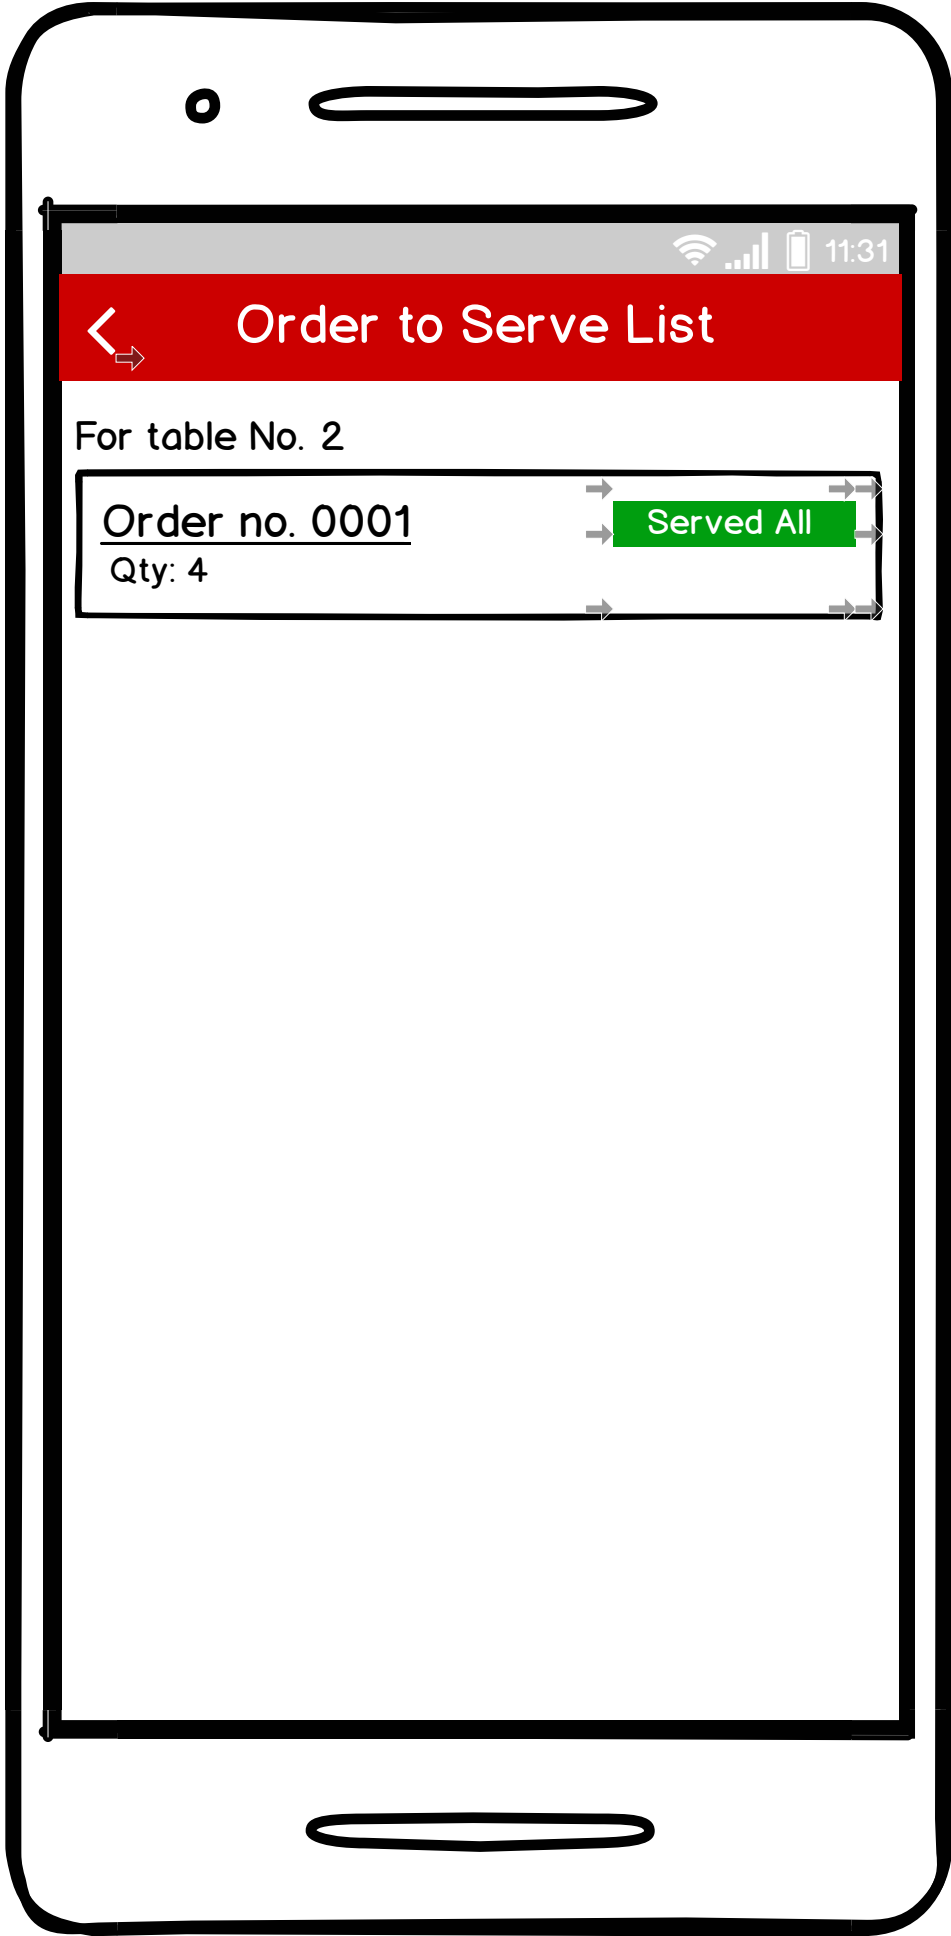

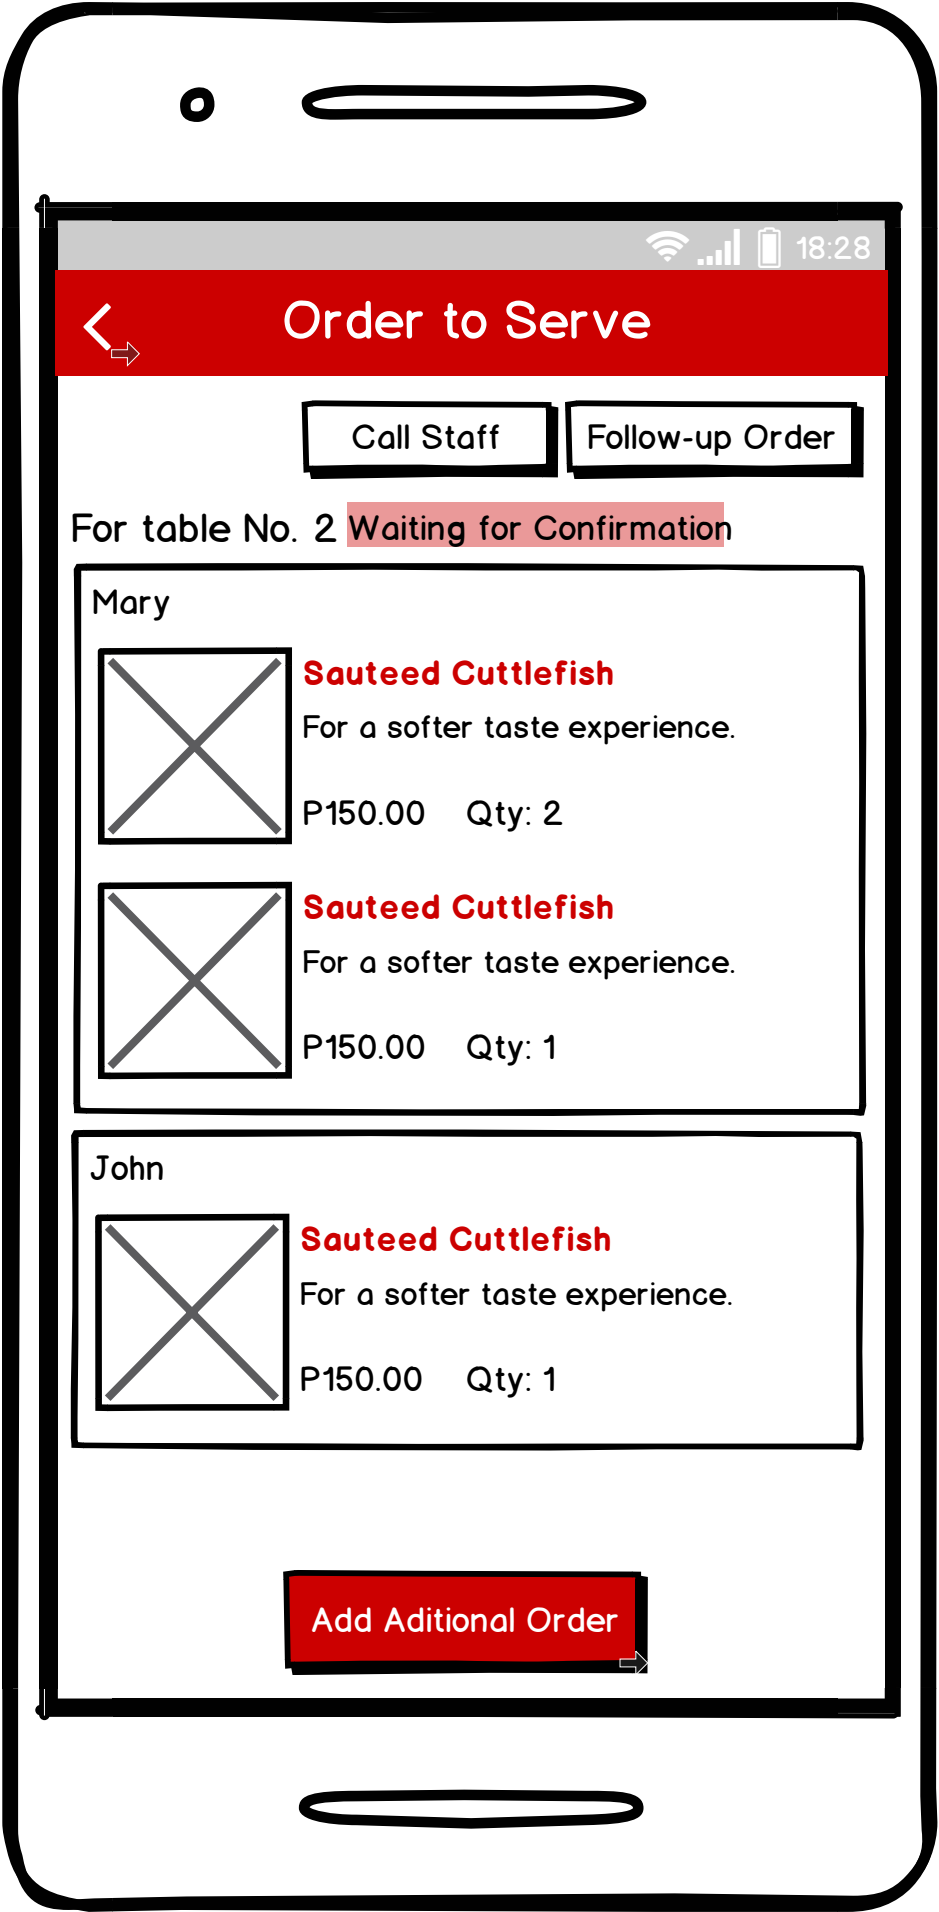

Error if cash is less than the total price.

Pay Now button is disabled if there is no input in the selected payment method. Or if there is error.

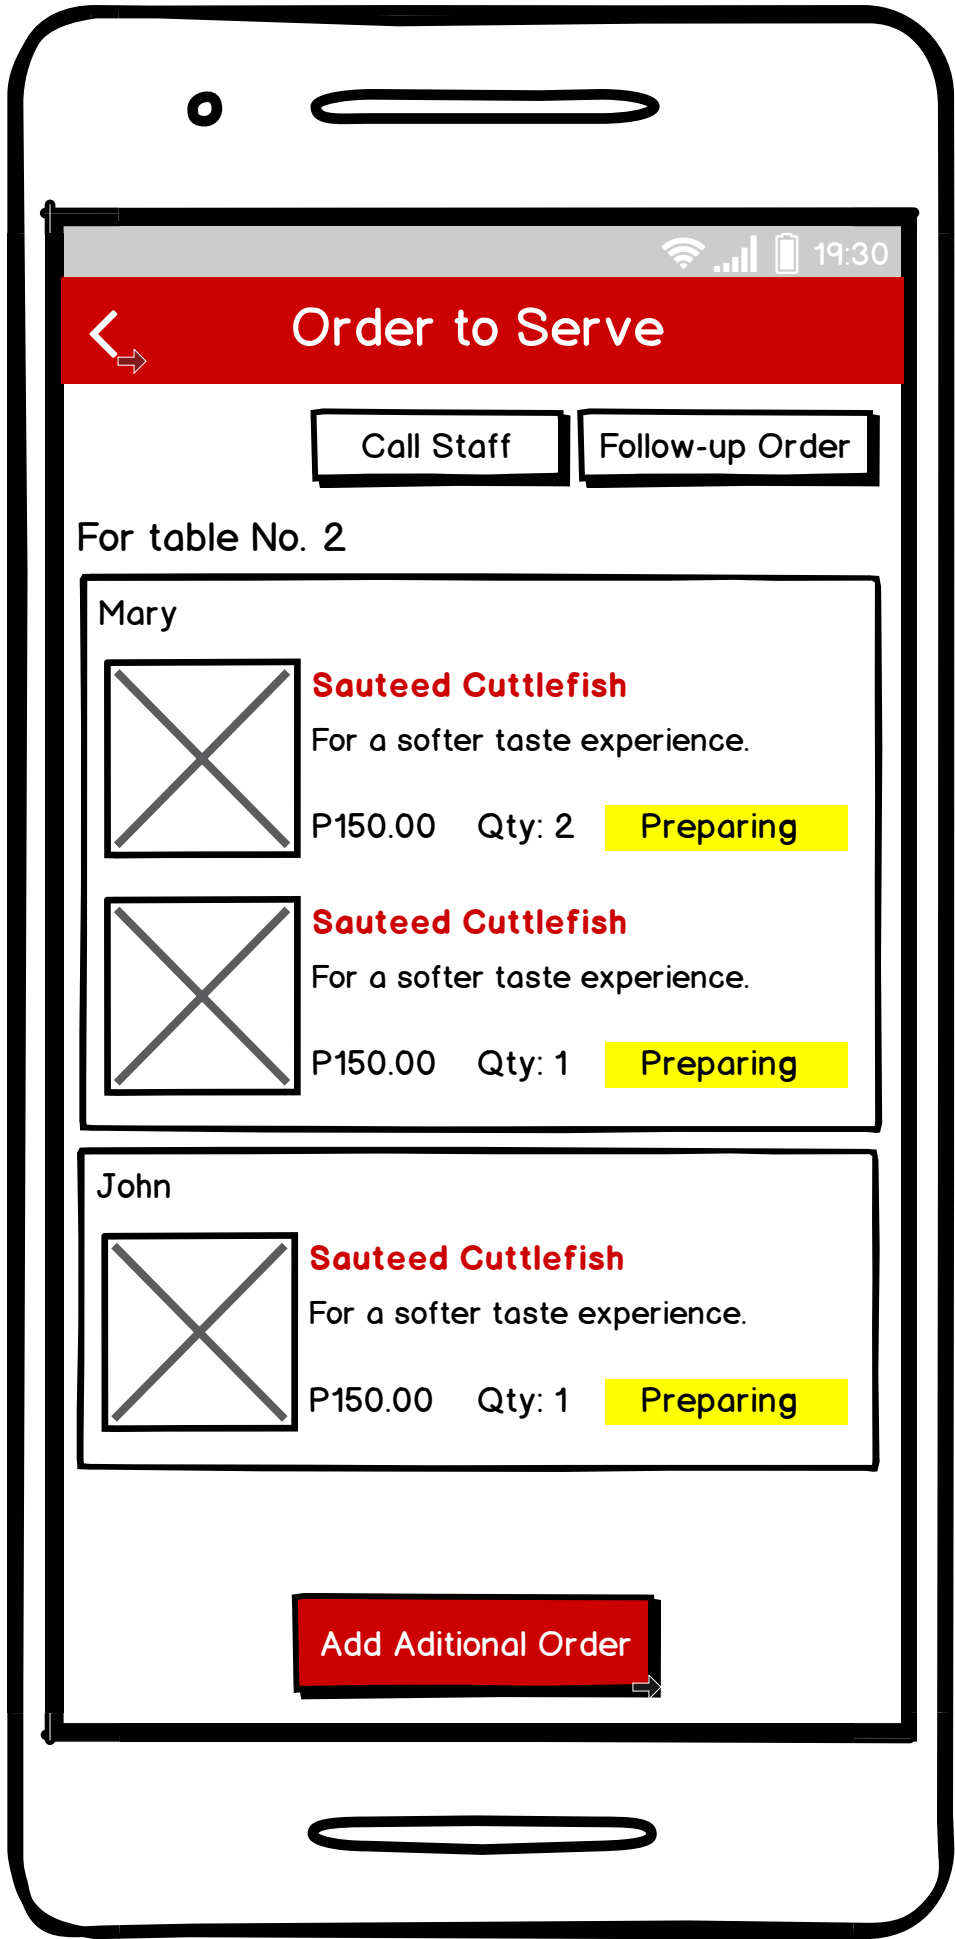

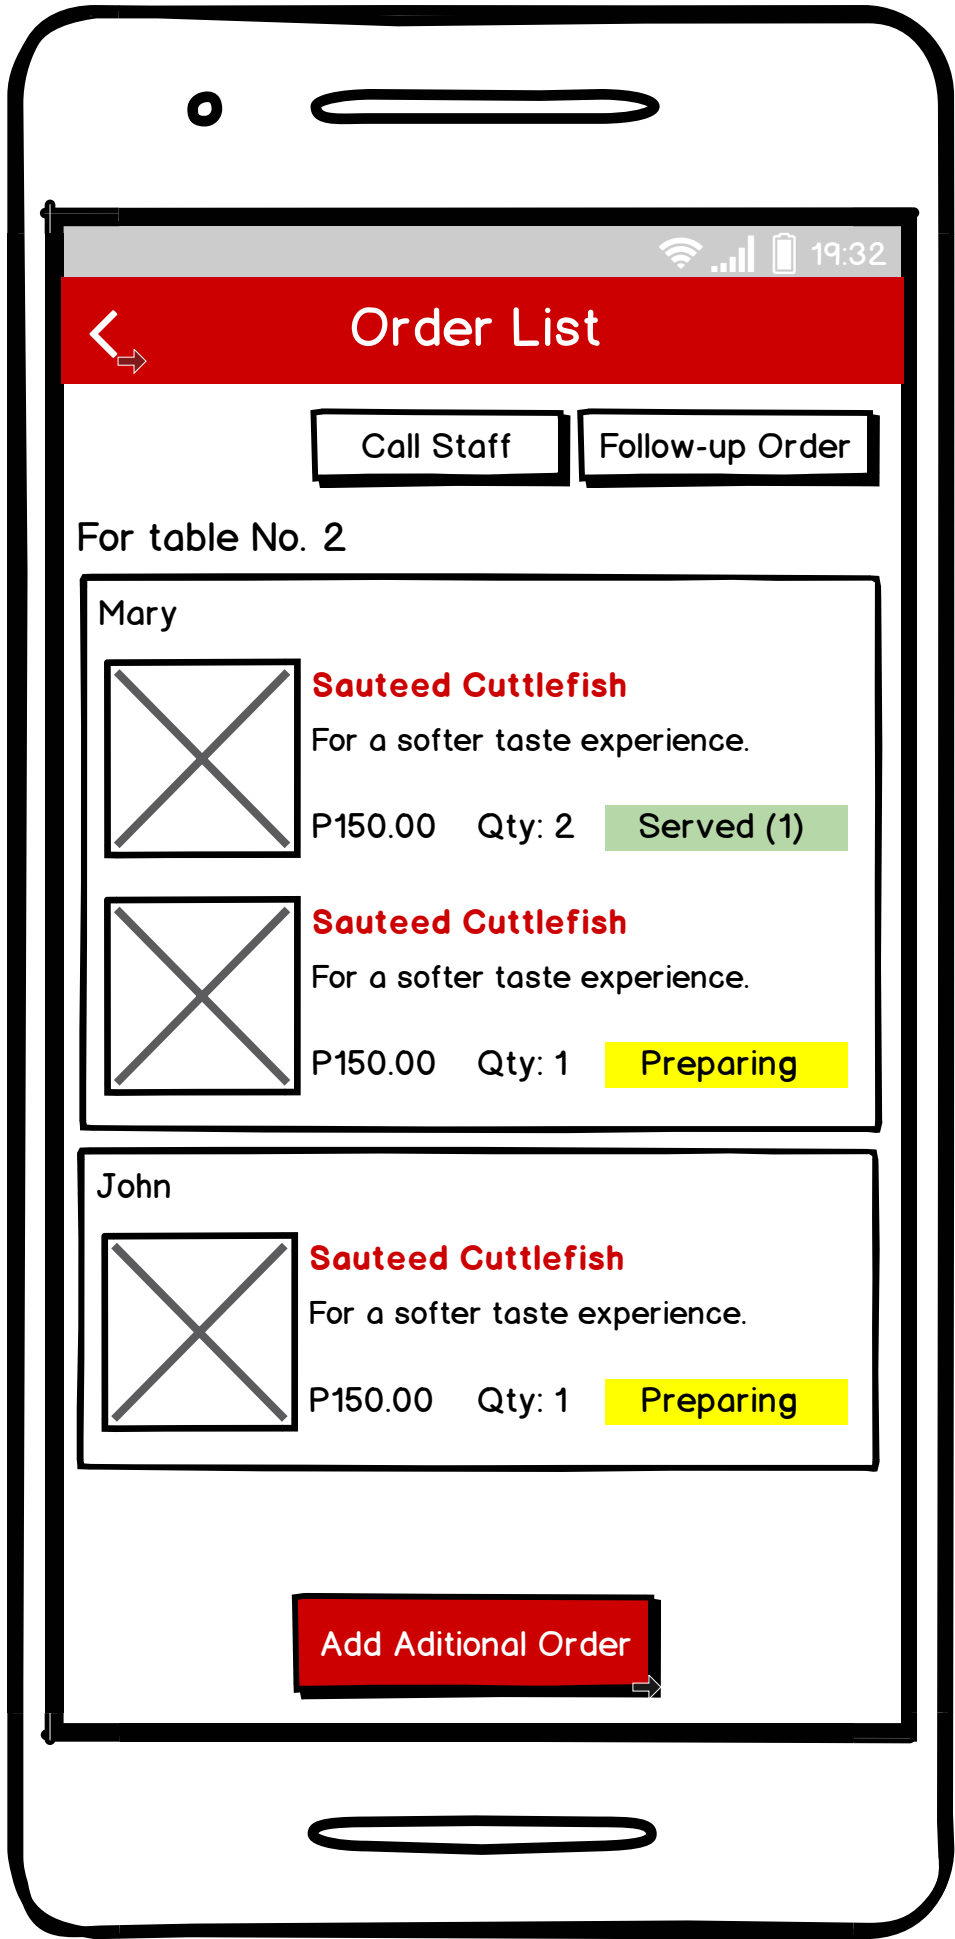

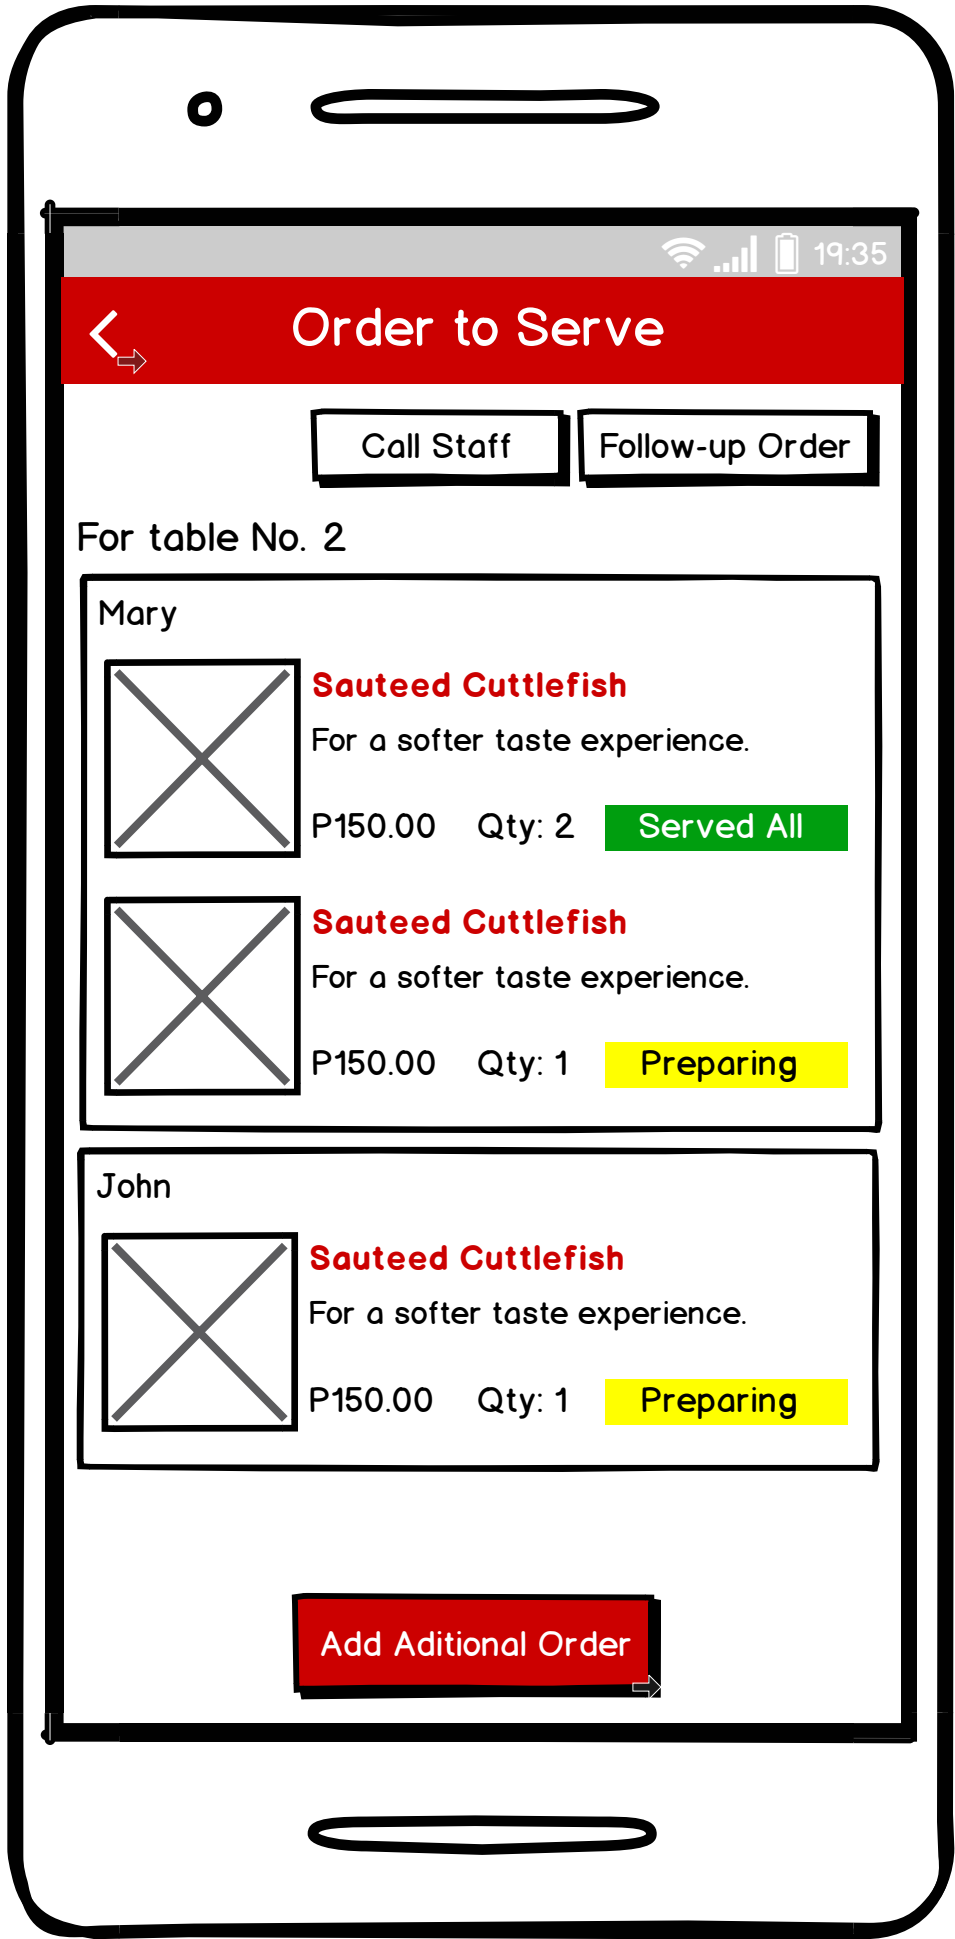

Call Staff - The customer may want something. Like tissue or water or any request.

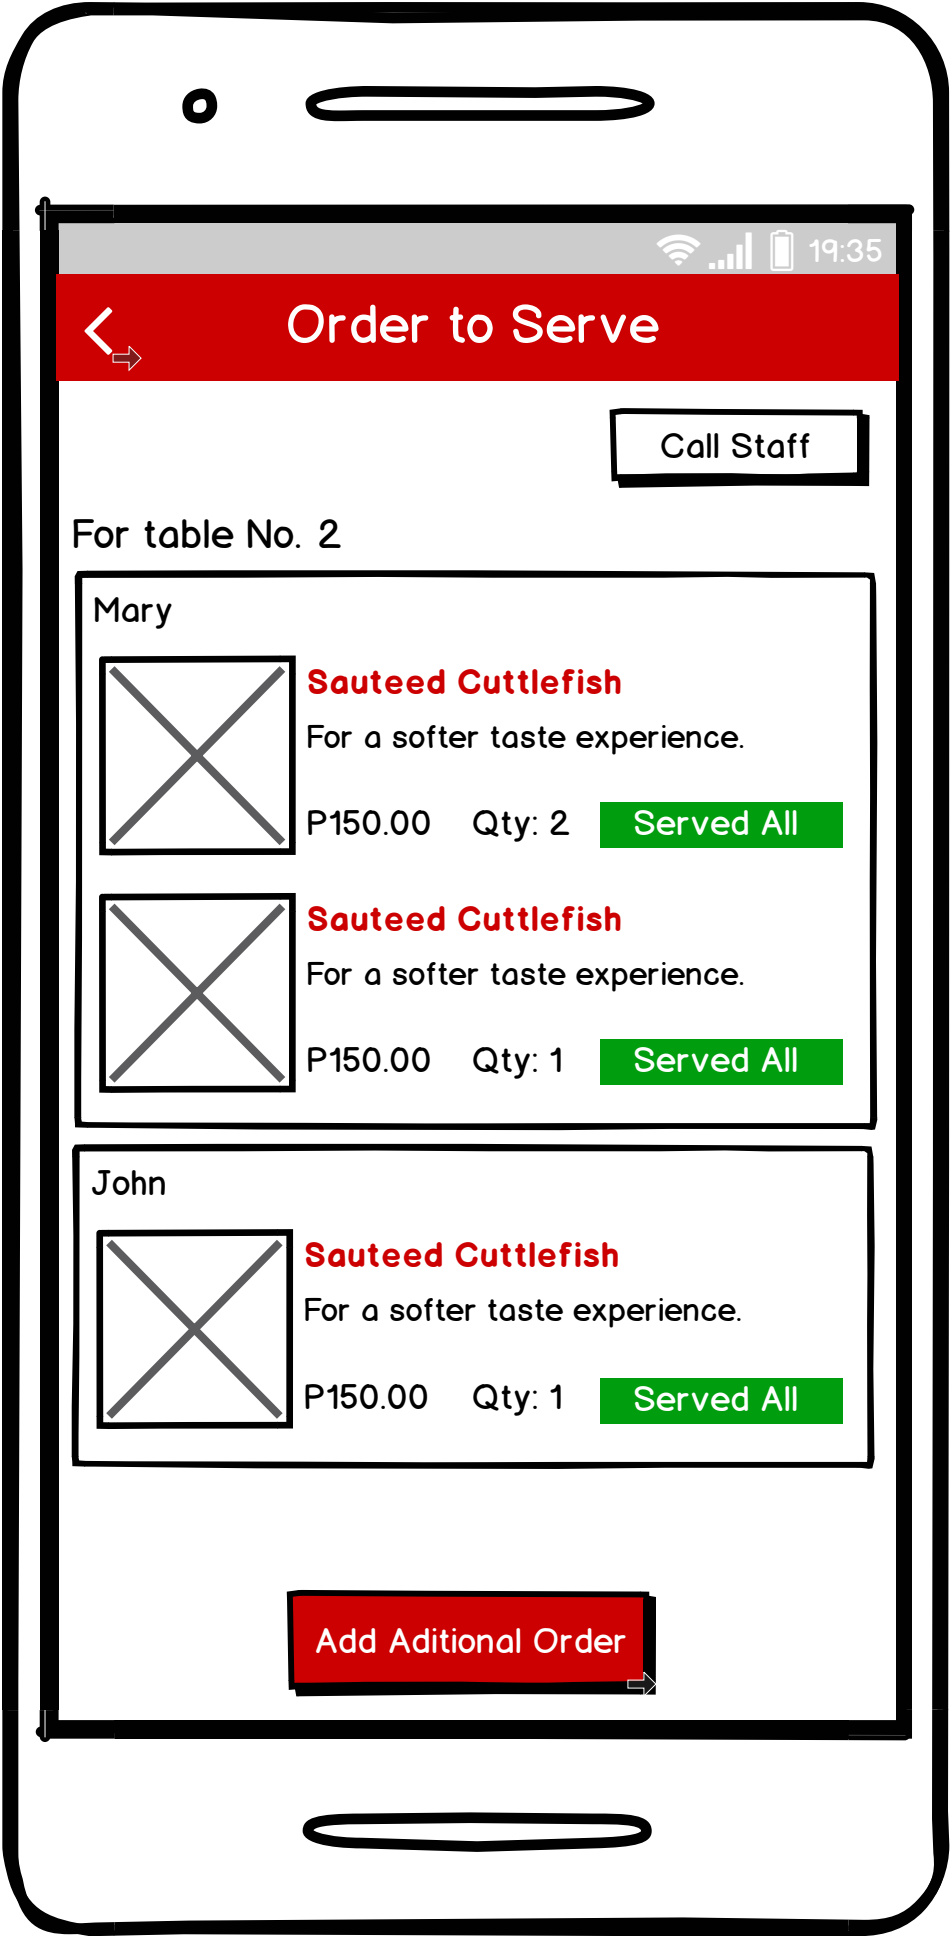

Follow-up order - The staff is notified that this table wants to follow-up their order.

Idea for this feature is that, everytime the user click these button. It will display on the store's big screen.

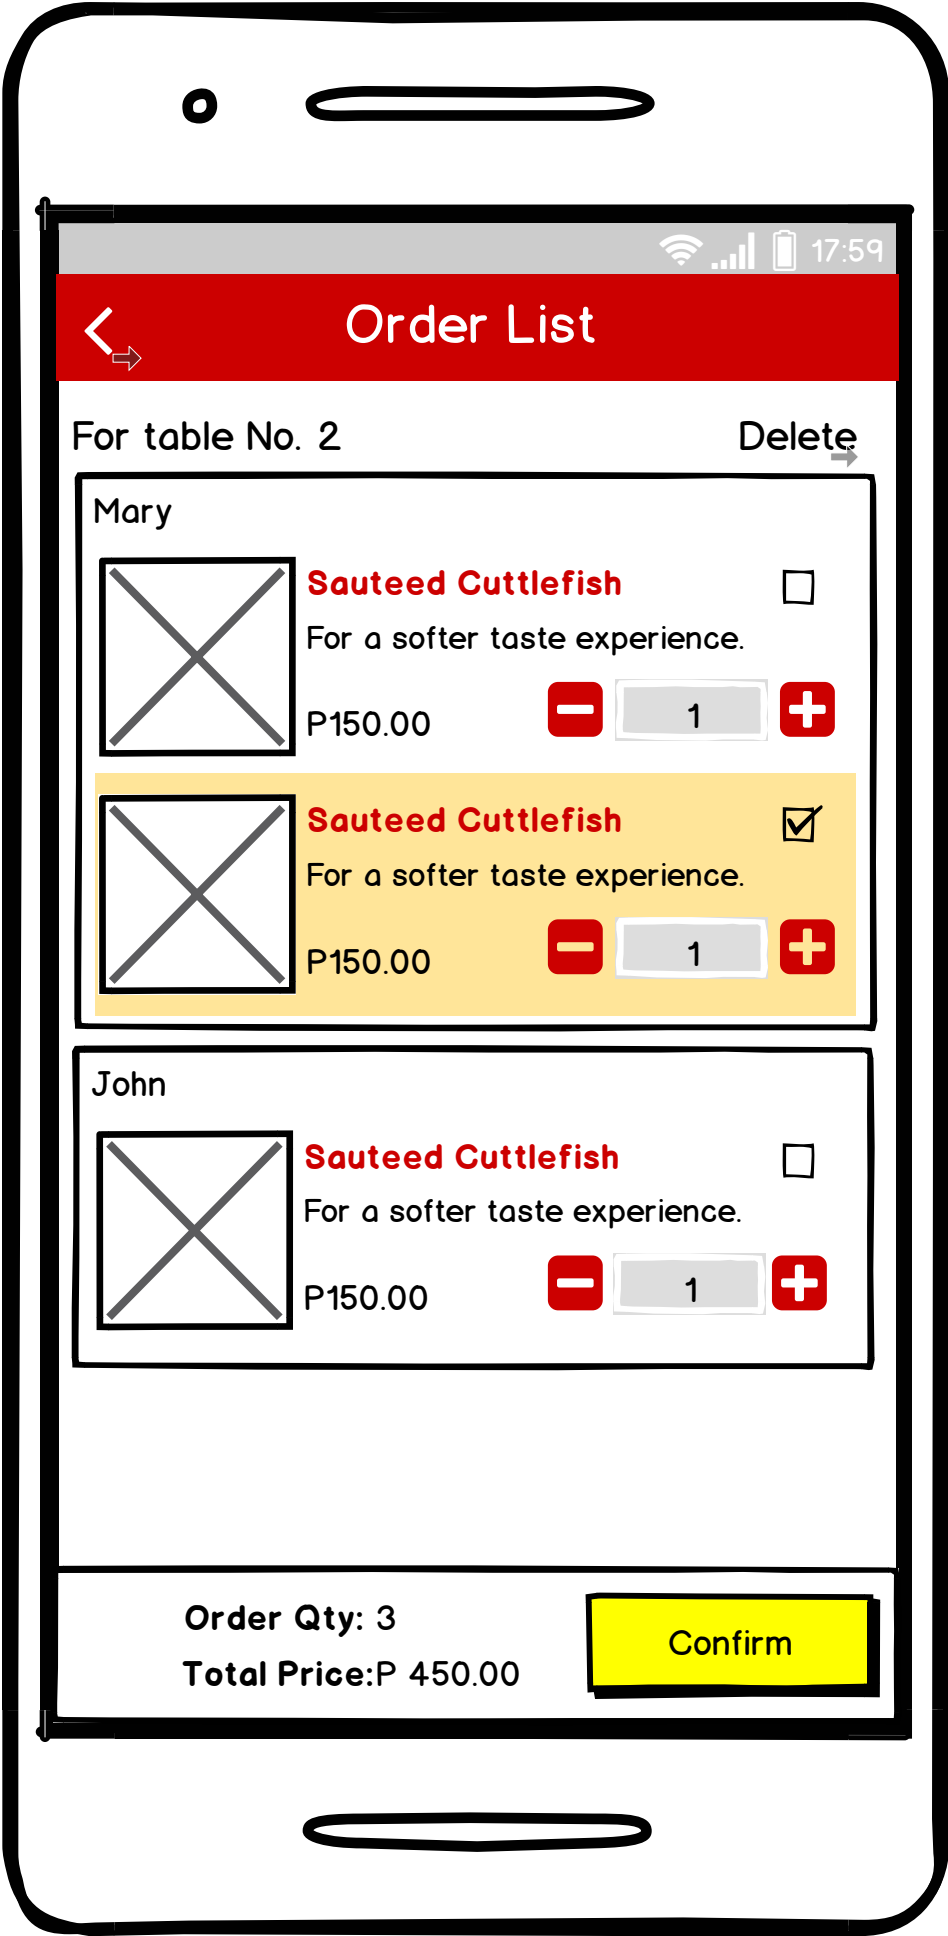

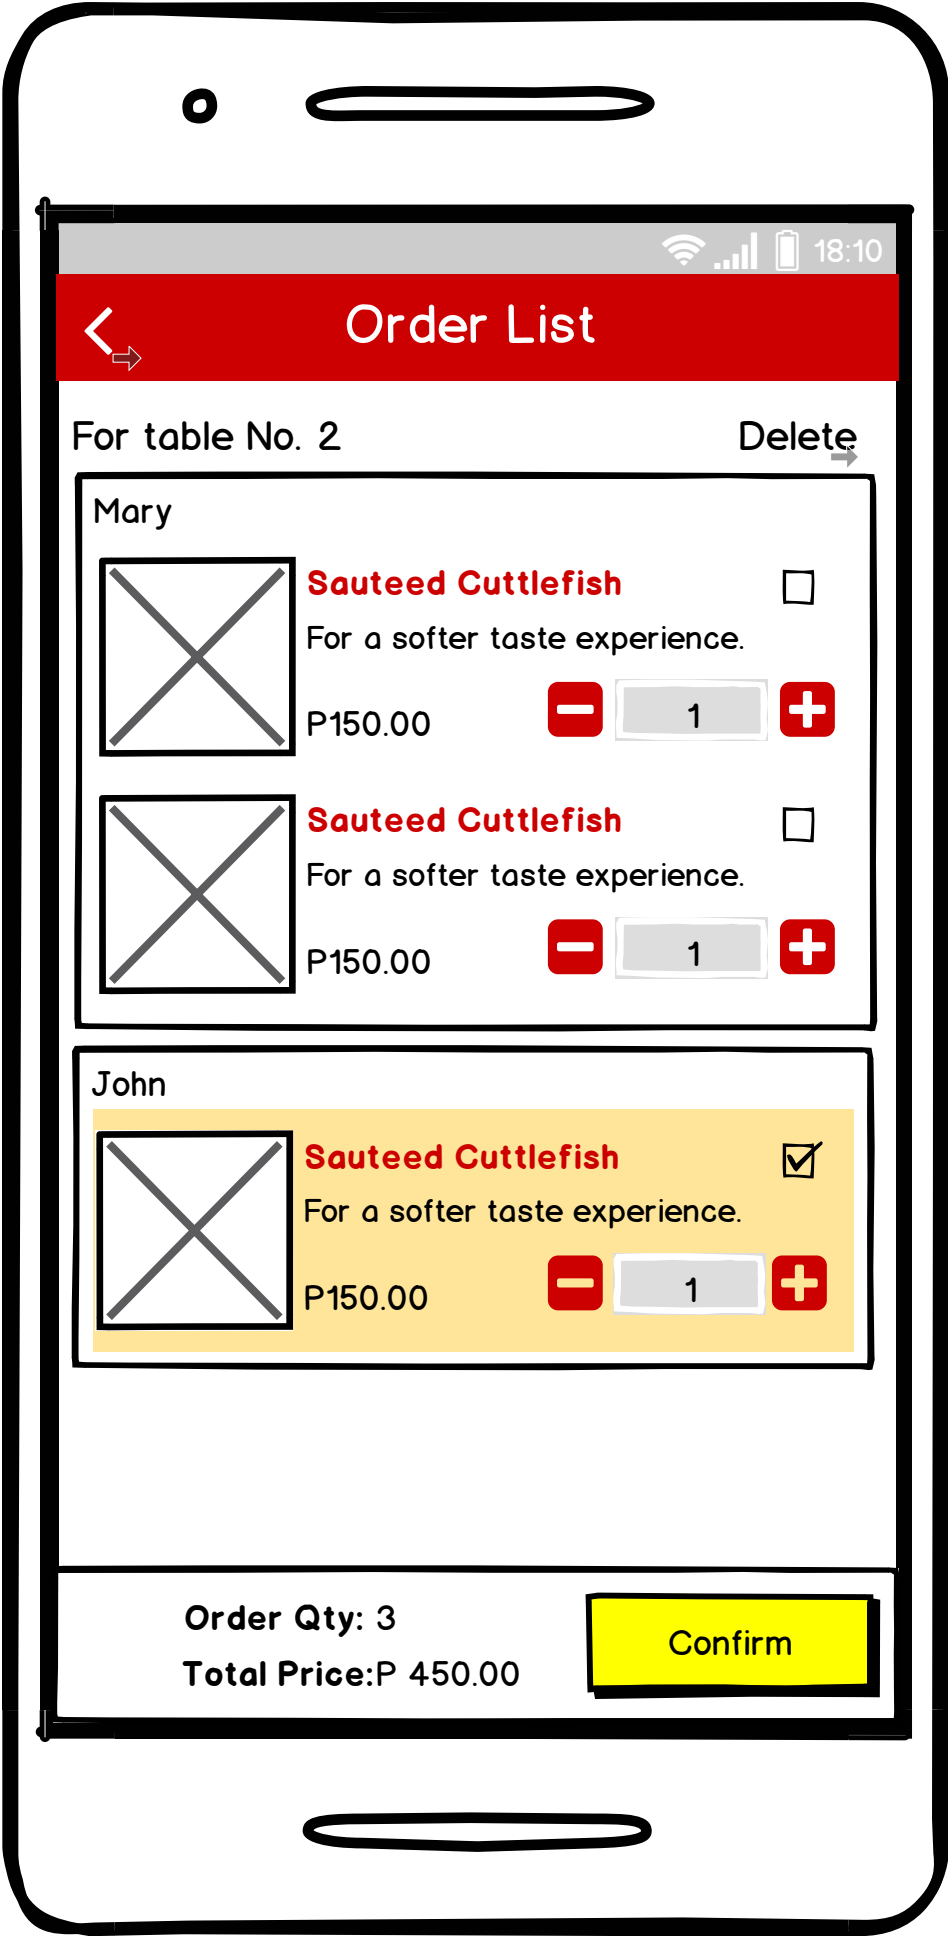

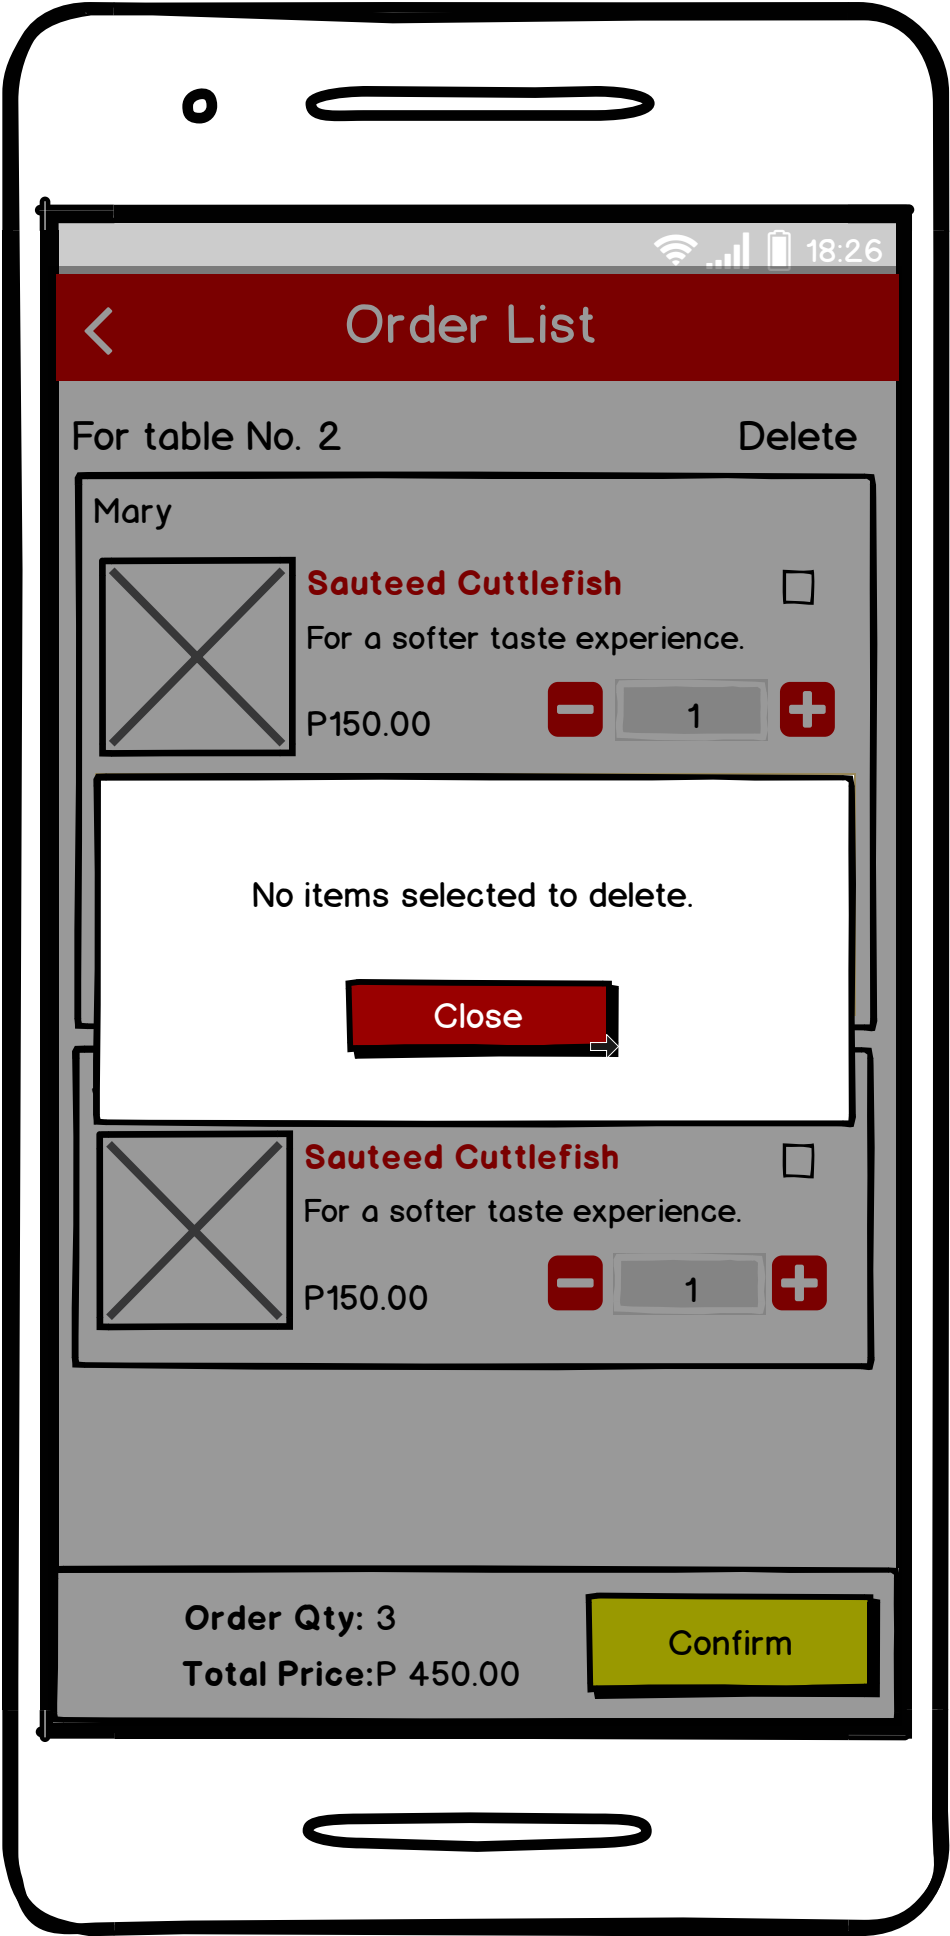

Follow up button is removed. Because all order is served.

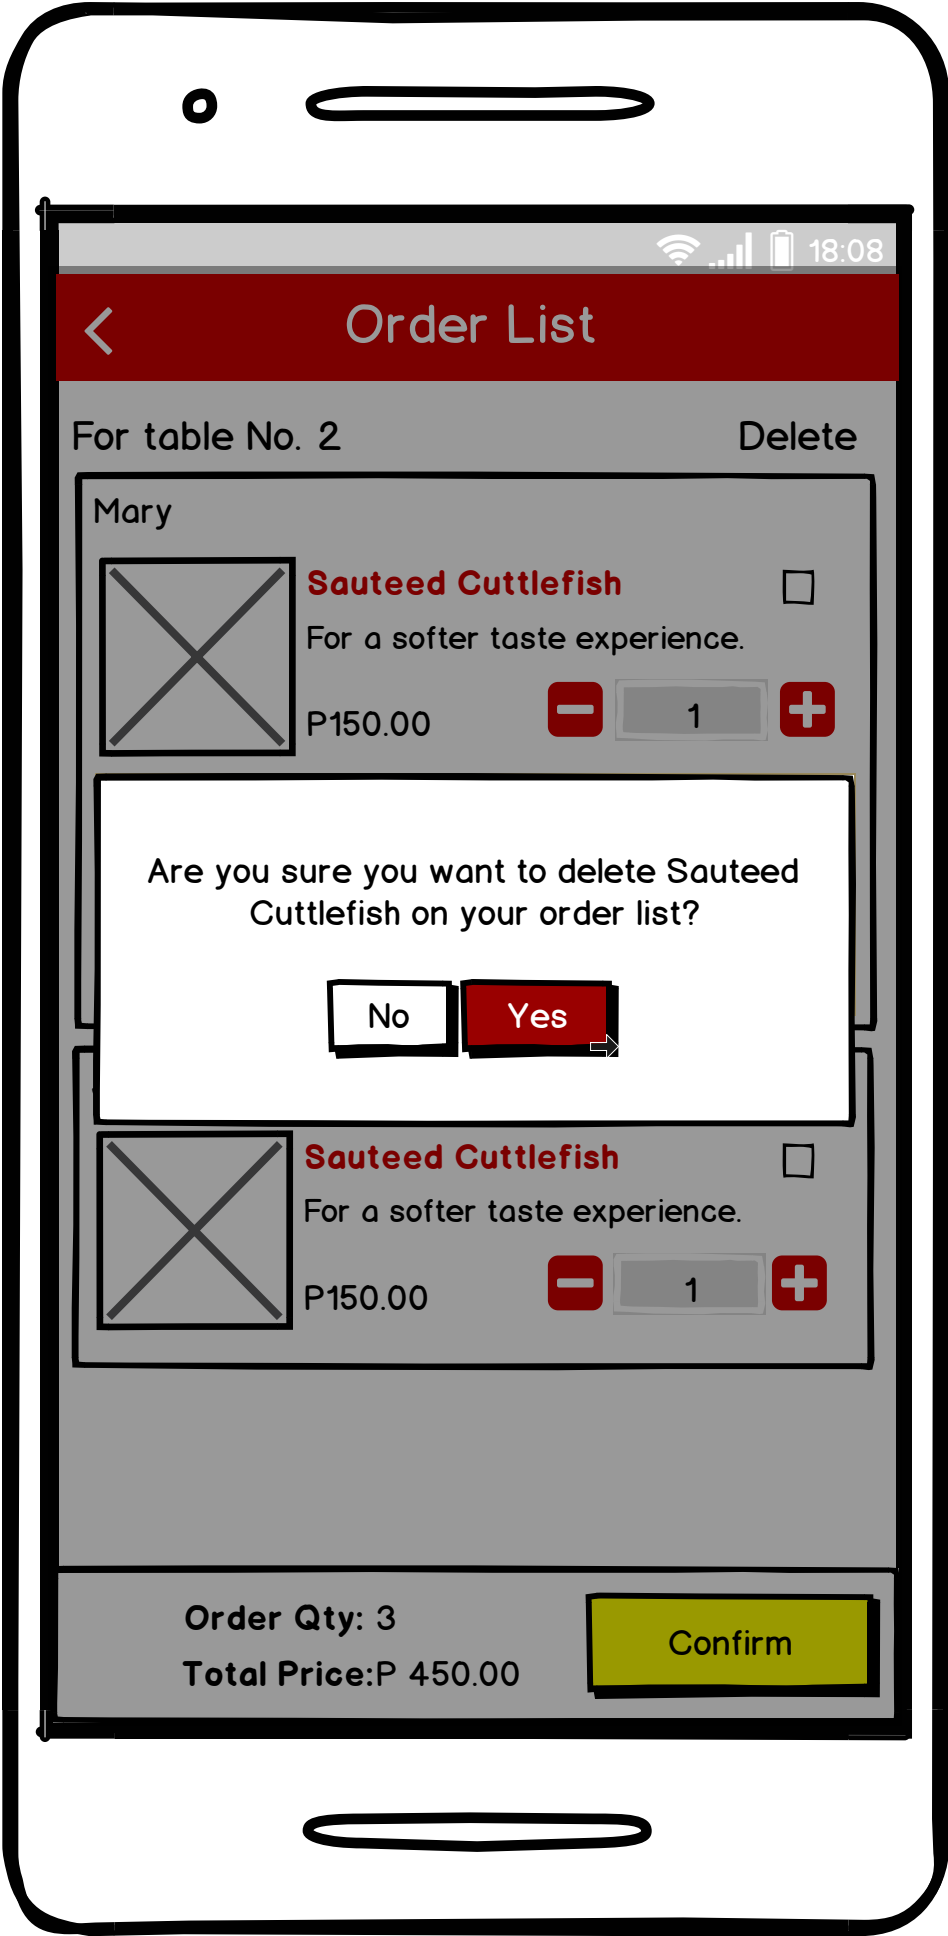

You can delete multiple orders.

You can delete multiple orders.

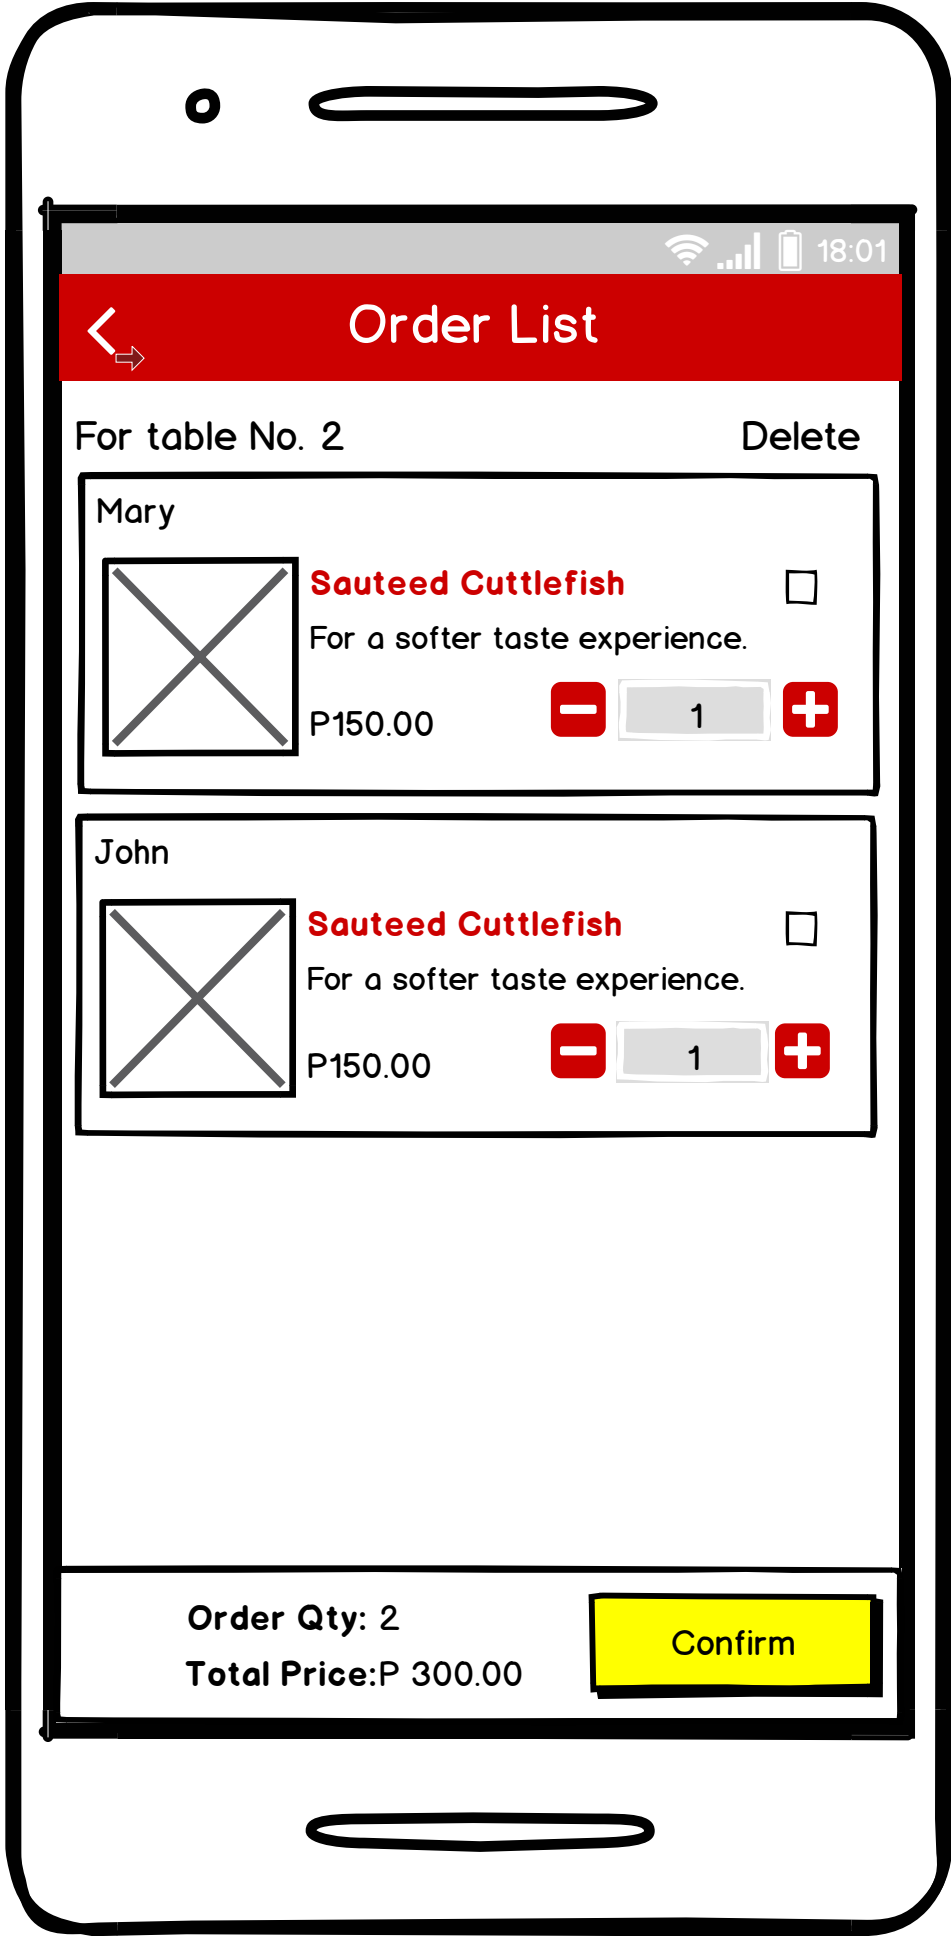

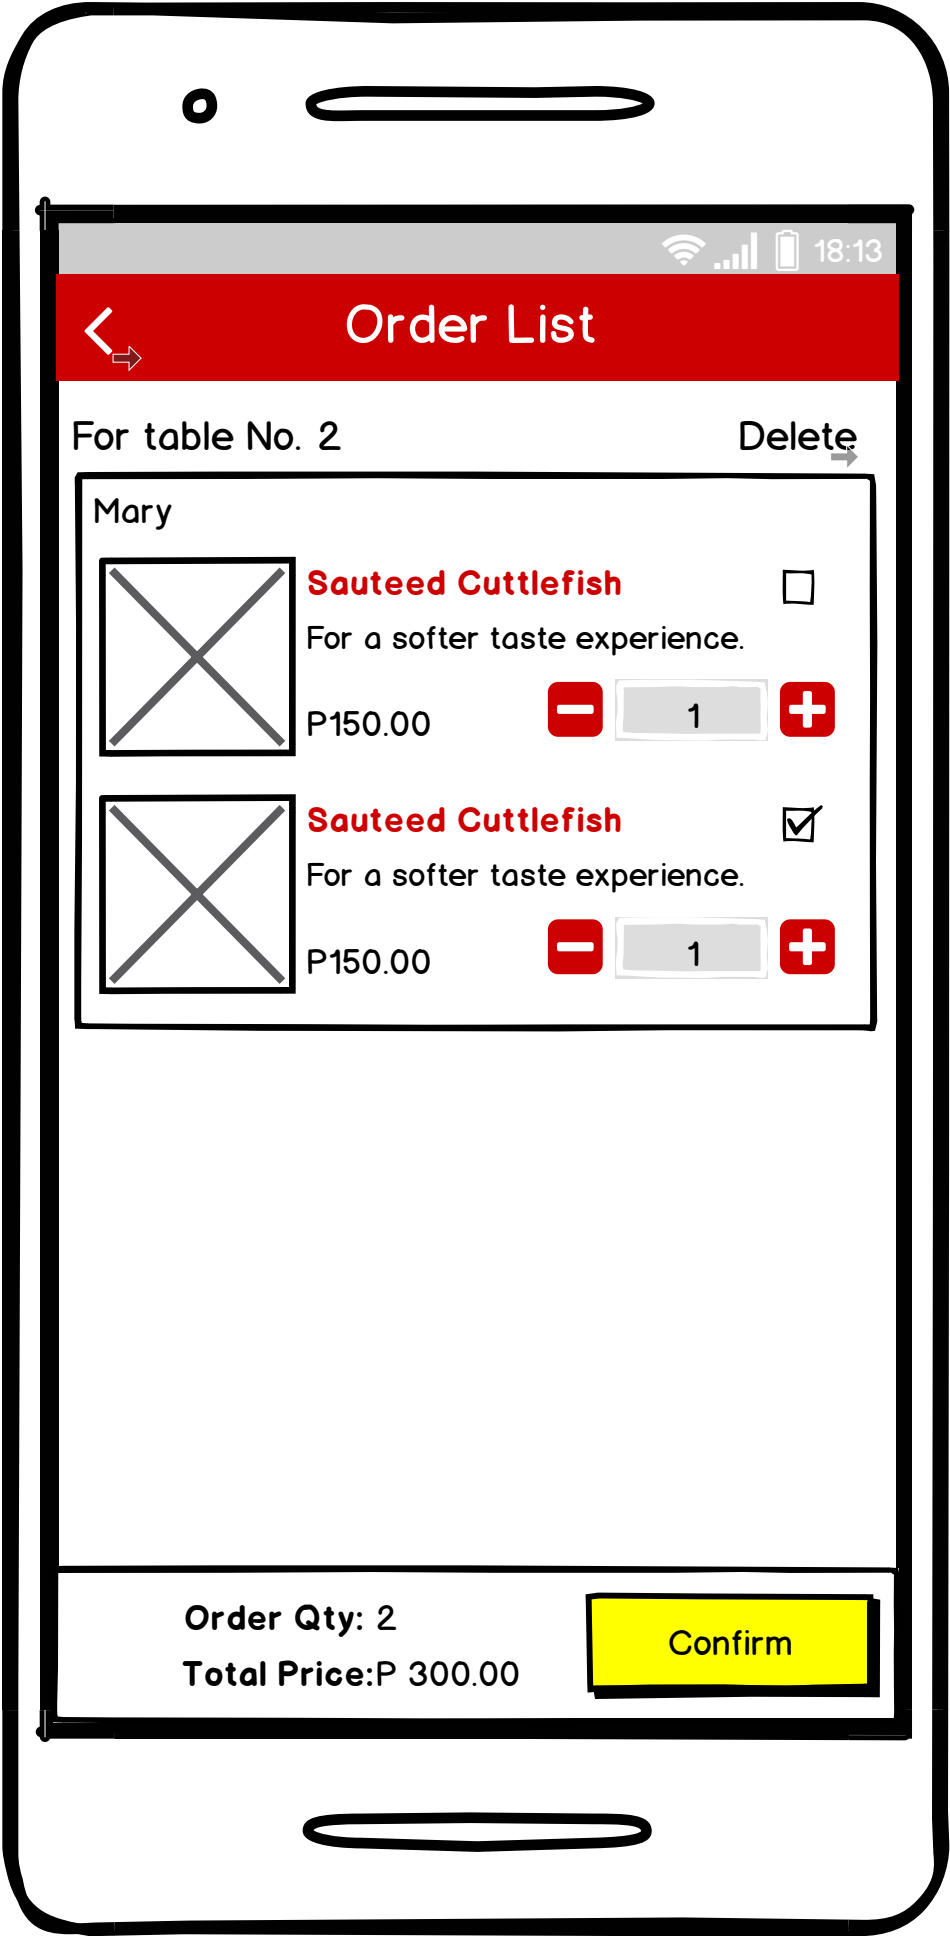

If the order is multiple, error message will be:
Are you sure you want to delete these on your order list?

If the order is multiple, error message will be:
Are you sure you want to delete these on your order list?

If the order is multiple, error message will be:
Are you sure you want to delete these on your order list?
